FROM STREET
from the Castle Parade

HIGH STREET.

THE whole length of the street from the Castle to Holyrood-house may be included under the general name High-street, which in this case is about a mile in length, and is, perhaps, in many respects, the grandest street in the world, if indeed we except the Trongate, in Glasgow. The towering height of the houses, with the diversity of their elevation, the grandeur of St. Giles's church, and the width of the street, contribute to the formation of a view no where else to be equalled. It has all the imposing effect which is produced by the extent and magnificence of the streets in the New Town, without any thing of their tameness and insipidity.

The High-street is narrow near the castle, widens at the Lawn-market, and expands still more at St. Giles's, preserving an uniform width from this to the Canongate, where it contracts into a narrower space, which it retains with very little variation till it terminates at Holyrood-house. The first remarkable object which occurs to the spectator when he enters the street from the Castle, is the reservoir. This cistern, and another on the rising ground to the south, contain about 300 tons of water, which is conveyed in pipes from a large basin at the foot of the Pentland hills. This basin is fed by artificial streams. Further down is the Weigh-house at the head of the West Bow, and a little below on the left is Bank-street. The noble church of St. Giles's next presents itself projecting somewhat into the street, and having the parliament house and square on the right. This part of the street has been much improved by the removal of the Lucken-booths, the Tolbooth, and other shapeless buildings. The Royal Exchange is a little below St. Giles's,

on the left, but not very conspicuous ; beyond this is the Tron church ; the street is here intersected by the North and South bridges, by which it is cut into two equal divisions. At the commencement of the Canongate, St. Mary's and Leith Wynds diverge in opposite directions. Besides these more considerable streets, an infinite number of wynds and closes, extremely abrupt and dangerous in their descent, ramify from the High-street, and lead on one side to the valley on the south of the New Town, and on the other to the heart of the Old Town.

In the middle of the High-street, between St. Giles and the Tron church, formerly stood the cross. This building was taken down in the year 1756. Its form was octagonal, measuring 16 feet in diameter and 15 in height, exclusive of a column rising from the centre : a small Ionic pillar occupied each of its angles, headed by a circular bastion. The entrance to the building was from the east, and over the door were placed the city arms. From the centre of the roof rose a column 21 feet high, curiously ornamented with thistles, and having on its summit the figure of an unicorn.

Edinburgh cross was the place where all proclamations were made, and where the merchants assembled to transact their business ; its site is now marked by a radiated pavement, and the bustle which here prevails on a market day ; for though the Royal Exchange affords a most convenient place of resort, the ancient custom of meeting at " the cross " still continues.

The middle pillar of the cross is preserved at Drnm, four miles east of Edinburgh.

THE HOUSE OF COMMONS

HIGH SCHOOL WYND, AND HIGH SCHOOL.

HIGH SCHOOL WYND, is a narrow lane, leading from the archiepiscopal palace in the Cowgate to Infirmary Street. The fronts of the houses here are mostly of wood, affording one of the best specimens of the ancient style of building in Edinburgh. Arnot observes, "From confinement in space, as well as imitation of their old allies the French, (for the city of Paris seems to have been the model of Edinburgh), the houses were piled to an enormous height, some of them amounting to twelve stories, these were denominated *lands*; the access to the separate lodgings in these high piles, was by a common stair, exposed to every inconvenience arising from filth, steepness, darkness, and danger from fire, such in a good measure is the situation of the old Town to this hour:" some of these staircases are exposed to the street, as appears by the view annexed.

The earliest notice of a School in Edinburgh, is to be found in an act of council for the year 1519, in which it is provided, that no "bairns" shall be put by their parents to any school but the principal grammar one, under a penalty of ten shillings Scots. The town-council in 1578 began the founding of a college, but were obliged by the opposition made by the Archbishop of St. Andrews and others, to drop the design for that time. But, that their children might not be altogether destitute of education, they agreed to pay one William Bickerton the sum of £260 Scots, for building a house for a school; and this was the commencement of the High School, the erection having been raised on the present site of that seminary. The insufficiency of the salaries, however, having

led the master and usher to propose quitting their situations, the council found it necessary to ordain, "that every scholar, whose father was a freeman, should pay quarterly to the master three shillings Scots, and to the usher two shillings, exclusively of the quarterages received by them of scholars, sons of unfreemen;" and that no person should keep a grammar school within the city or liberties, without leave from the magistrates; encouragements, which seem to have retained the services of the teachers.

In the year 1598, the system was improved by a regulation, which appointed four regents or masters to preside over that number of classes, and assigned to each class the authors to be read in it. At this time, too, it was provided, that the two under-masters should have an annual salary each, of £20 Scots, together with 13*s.* 4*d.* per quarter from their scholars; that the third master should have a quarterly allowance of 40 merks Scots, and from each scholar 15*s.* and that the principal master should have 200 merks of yearly salary, and 20*s.* per quarter, with other regulations. The masters were then "discharged from receiving any bleise-silver from their scholars, and likewise bent-silver, other than four pennies at one time," and were required to furnish security to the amount of 500 merks that they would not resign their offices without half a year's warning.

In 1709, the common-council decreed, that for all times coming, the following should be the rule of payment: the rector to have a salary of 300 merks Scots yearly, 4*s.* sterling per quarter for each boy in his own class, and 1*s.* quarterly from every scholar in the other classes; and the four inferior masters to receive an annnal salary each of 250 merks, and 4*s.* sterling "from the several scholars in the respective classes."

In 1595 the scholars were engaged in a *barring out*, when a boy of the name of Sinclair shot Macmoran, one of the baillies, who had been sent to reduce them to submission. The culprit, notwithstanding the most strenuous exertions on the part of

the citizens to bring him to justice, was pardoned by the king through the superior interest which was employed in his behalf.

The foundation of the present School was laid on the 24th of June, 1777, by the late Sir William Forbes, grand master of the Free Masons, assisted by the mason lodges in the city, and accompanied in procession by the magistrates, the professors, and the masters and boys of the High School. The length of the building is 120 feet, its width 36. An extensive area surrounds it, inclosed by a high wall.

The course of education at this seminary is carried through a period of four years, to which two years may be added by those who wish to complete their acquaintance with Latin, and to acquire Greek. Each master conducts his own class through the successive stages, and after consigning them to the rector, returns to commence a new class. Thus the masters proceed in rotation, the rector always receiving the completed class. Those boys who are with him two years are not required to attend the initiatory department at college. The first year is occupied in learning of the rudiments, (Ruddiman or Adams), and a vocabulary, and in reading Cordery, Phædrus, and the grammatical exercises. In the second year, the boys proceed to Cornelius, Eutropius, and Cæsar, continuing the grammatical exercises. The books of the third session, are Ovid, Virgil, and Sallust, with Mair's Introduction. Some part of Cæsar also is read, and occasionally the Greek language is attended to. In the fourth year, Mair's Introduction, Virgil, and Sallust are continued, to which are added Quintus Curtius, and Excerpta from different authors. Latin verses are now prescribed, and it is optional to read portions of works which are not then reading in the class; an exercise which receives the name of *private studies*, and in consequence of which, boys are placed higher in the class. At the rector's class, various books are read; and it is no uncommon thing for the boys to have read in the space of a year, very large portions of Livy, Horace

HIGH SCHOOL WYND, AND HIGH SCHOOL.

Virgil, and Homer, with miscellaneous authors, besides producing exercises both in prose and verse, characterized by the most elegant Latinity.

The master conducts the whole business of his department for the first year himself, but afterwards calls in the assistance of his monitors, forming for this purpose his class into divisions, the number of which is diminished as the pupils improve. The classes are opened to the inspection of any person at all times, and, besides a public quarterly examination of his own class by the rector, there is a general examination of the whole school in the beginning of August when the Session is about to close. On this occasion the Dux of the rector's class, and the best Greek scholar receive gold medals, and in the other classes, from one third to one fourth of each class, are rewarded with prizes of books, those at the top getting the most valuable. The course commences in October, and the vacation is six weeks or two months. The hours of attendance are from 9 to 11, and from 12 to 2 during the earlier part of the course, but an additional hour is given in summer for the purpose of preparing for a respectable appearance at the general examination.

The character of this institution was very much raised by the late celebrated Dr. Adams, and is still supported by the able superintendence of the present rector and his coadjutors, as is well evinced by the fact, that about 800 boys are at present attending the High School.

A library, containing from 8 to 10,000 volumes, is attached to the school, the subscriptions for which, by the boys in the rector's class, have amounted for three years past to about £90 annually.

HUGH SCHOOL.

/ Lath /

HIGH SCHOOL, LEITH.

THE Grammar School at Leith stands on the south west part of the Links or Downs, in the immediate vicinity of the town. It was erected in 1805, and the expenses were to be paid by voluntary subscriptions.

The building consists of two stories, having a projecting centre, and a rusticated basement ; from the middle of the roof rises a small turret, which contains a dial. The rooms for the different classes are elegant and commodious, and the teachers of this grammar school are inferior to none, in every qualification necessary for the instruction of youth,

An article published in the Scots' Magazine, dated from Leith, March 29th, 1804, gives the following account of laying the first stone of the building. “ The foundation stone of the new schools at Leith was laid this day, in the presence of an immense concourse of people ; though the day was unfavourable, several circumstances concurred to interest the public mind. The want of proper accommodation for the instruction of youth in the different branches of education, had long been felt with great regret ; but as the town has no public funds, there was little probability of seeing this desirable object speedily accomplished. In the present flourishing and enlightened state of the community, it occurred to some spirited individuals, that the sum necessary for erecting new schools might be obtained by voluntary contributions. This scheme was no sooner proposed than adopted ; and to the honour of the town, a very large sum was collected in a few days, every class of the inhabitants subscribing with a zeal and liberality, which have never been surpassed on any similar occasion.

“ It was known that the stone was to be laid by the chairman of the committee, as master of the Phœnician Lodge ; who, from his situation, has fortunately the power, as he has naturally the inclination, to promote every undertaking of public utility. The Royal Leith Volunteers had offered to escort the procession, and all public and official persons in the town were invited to attend. At one o'clock the procession moved from the Assembly Hall, to the place marked out for the new building ; when it arrived at the appointed spot, it opened to the right and left ; and the right worshipful master of the lodge, accompanied by the brethren, stepped forward to the south east corner of the intended building, and there laid the foundation stone, with the usual masonic solemnities.

“ In the stone were deposited, a glass for containing the coins of George III. an Edinburgh almanac, newspapers, &c. The jar was covered with a tin-plate, having a suitable inscription engraved on it ; together with the names of the magistrates, ministers, masters of incorporation, and of the committee for conducting the building. The master having pronounced the usual benediction, and a suitable address being delivered by one of the ministers, the company retired.”

View of the Mill, from the River, 1840.

THE MILL, 1840.

CHURCH OF ST. ELMER. HOUSE.

THE TOMB OF KING JOHN OF FRANCE

ABBEY OF HOLYROOD HOUSE.

THE Abbey of Holyrood-house lies contiguous to the palace of the same name, both of them being situated at the eastern extremity of the Old Town. According to tradition, it was founded by David the First, who being assaulted by a stag, was miraculously delivered by the means of a cross which fell from heaven. This monarch, the night after his happy escape, was directed by a vision to erect a house for canons regular on the spot where the cross appeared to him ; accordingly, in the year 1128, he founded this abbey, calling it the monastery of the *Holy Cross*, and lodging in it, with great formality, the celestial instrument of his preservation, which had remained in his possession ; and here it continued till the battle of Durham, when it was taken by the English, and preserved in the town of Durham for many ages with superstitious veneration.

The canons of Holyrood were of the order of St. Augustine, and came originally from St. Andrew's. It appears that an ample provision was made for their support, the charter of erection conveying to them a perpetual right to the church of the castle, the church and parish of St. Cuthbert, the chapels of Corstorphia and Liberton, with part of the adjoining lands, the church of Hereth, in Stirlingshire, the towns of Broughten, Pittendrich, Hamar and Fordham, the lands of Inverleith, one half of the tallow, lard, and hides of the beasts killed in Edinburgh, besides several priories, fisheries, and revenues out of the exchequer. Succeeding kings having extended the privileges of the abbey, it was considered the richest establishment of the kind in Scotland, its revenues, at the period of the Reformation, amounting in money to £250 sterling annually, and in kind to

442 bolls of wheat, 640 bolls of beer, 560 bolls of oats, 500 capons, 2 dozen of hens, 2 dozen of salmon, 12 loads of salt, and of swine, a number not precisely ascertained. The canons also, at the origin of the institution, were provided by David with a right to the trial by duel, and to the water and fire ordeals. Besides the abovementioned privileges, the canons had the right of finding out “noted witches and warlocks,” and of determining controversies of every kind; and their abbey furnished an asylum to the guilty, whom it was accounted sacrilege to follow, except in the case of murder.

In the year 1177, a national council was held in the abbey, in consequence of a dispute between the English and Scottish clergy, as to the submission of the latter to the church of England, a legate having been sent by the pope to take cognizance of it. In the years 1332 and 1385, it suffered from the devastations of the English. In 1457, Archibald Crawford, lord high treasurer of Scotland, was appointed abbot of Holyrood House. By him, the pointed style of architecture, which characterizes the present state of the abbey, was substituted for the Norman employed by David the First. When the earl of Hertford entered Scotland in the year 1544, this monastery was almost entirely consumed by his soldiers, the choir and transept of the church having been destroyed, and nothing preserved but the nave. It was then that sir Richard Lea carried off the brazen font, in which the children of the royal family had been usually baptised, and after engraving an insolent inscription on it, presented it to the church of St. Alban's, in Hertfordshire. The inscription was in Latin, and may be thus translated:—“When Leith, a town of good account in Scotland, and Edinburgh, the principal city of that nation, were on fire, sir Richard Lea, knt. saved me out of the flames, and brought me into England; in gratitude to him for his kindness, I, who hitherto served only at the baptism of the children of kings, do now most willingly offer the same service to the meanest of the English nation. Lea, the con-

queror, hath so commanded. Adieu. A. D. 1543, in the 36th year of king Henry VIII."

This font in the time of Charles I. was sold for its weight of metal, and ignobly destroyed. After the battle of Pinkey, the monks made their escape, and the church and palace were stripped of the lead which covered them, by the English, who also took down the bells. At the reformation, the monastery was dissolved, and the church completely despoiled: from a mistaken principle of religious zeal and devotion, the earl of Glencairn laid waste the beautiful chapel, broke into pieces its valuable furniture, and laid the greater part of the statues and other ornaments in ruins. It was again fitted up by James the Seventh, in a very elegant manner, being paved with marble, and having many beautiful shields and armorial devices executed upon it; the king also erected a magnificent throne, and twelve stalls for the knights companions of the order of St. Andrew, with a large and fine toned organ. Chosen workmen were sent from London, with directions to finish the twelve apostles in the best manner, to be placed in as many different compartments, or niches, along the interior of the building on one side, and as many of the prophets for corresponding niches on the other. This design was most violently opposed by the bigotted populace, who alleged that the king intended to establish the popish rites and ceremonies, and that these statues were intended as objects of adoration, and consequently the whole of the workmanship was defaced, and the artizans compelled to desist from their undertaking. At the Restoration Charles the Second completely repaired the church, and ordained that it should in future be set apart as a chapel royal, and be no longer used as the parochial church of Canongate. It was therefore prepared for this purpose in a very splendid manner; a throne was placed in it for the sovereign, and twelve stalls for the knights of the order of the Thistle: but, at the revolution, the populace were again roused by apprehensions of popery, and giving vent to their fury, set fire to the church, and reduced

the interior to a state of ruin; they at the same time broke open the sepulchres of their sovereigns, opened the coffins, and left the bodies naked and exposed.

Arnot observes, that “ these walls, which could withstand the fury of a mob, have since been brought to the ground through the extreme avarice or stupidity of an architect. As the roof of the church was becoming ruinous, the duke of Hamilton, heritable keeper of the palace, represented its condition to the barons of the exchequer about the year 1758, and craved that it might be repaired. To this effect an architect and mason were consulted. The walls of the church were already upwards of 600 years old, and were but in a crazy condition, yet did these men propose, instead of putting a slate roof on it, to cover it with flag stones. This new roof soon injured the fabric. A report was made to the barons by another architect in 1766, that the church would speedily become ruinous if the new roof was not taken off, as the walls had never been intended for so vast a load. Nothing was done in consequence of this report, and the church fell on the 2nd of December, 1768; when we lately visited it, we saw in the middle of the chapel, the broken shafts of the columns which had been borne down by the weight of the roof. Upon looking into the vaults, the doors of which were found open, we found that what had escaped the fury of the mob at the Revolution, became a prey to the rapacity of the mob who ransacked the church after it fell. In 1776 we had seen the body of James V. and some others, in their leaden coffins. The coffins were now stolen. The head of queen Magdalene, which was then entire, and even beautiful, and the scull of Darnley were also stolen. His thigh bones, however, still remain, and are proofs of the vastness of his stature.”

The chapel of Holyrood-house in its pristine state, was a magnificent structure of the English or pointed style of architecture. Its west front has been compared with Melrose abbey, Ely, and York, cathedrals. The highly enriched

ABBEY OF HOLYROOD HOUSE.

windows which lighted the rood loft are universally admired. The columns, mouldings, and sculptures of the west door, are executed in the boldest style of alto-relievo, and exhibit various grotesque devices, the whole elegantly designed and executed. Immediately above the door is a small square stone, having this inscription.

HE SHALL BUILD ANE HOUSE
FOR MY NAME, AND I WILL
STABLISH HIS THRONE
FOR EVER.

BASILICAM HANC SEMI
RUTAM CAROLUS REX,
OPTIMUS INSTRAURAVIT.
ANNO DOM.
CICLOXXXIII.

The north side of the building is ornamented with buttresses, enriched with canopied niches and pinnacles ; this was the work of abbot Crauford in the time of James III. The south side of the church is likewise adorned with buttresses, but differing from those of the north. At the east end is the great window, the tracery of which was thrown down by a storm in 1795, but has since been replaced. The belfry is a small tower on the north-west corner of the abbey church, and contains a finely-executed statue of lord Belhaven. On the compartments behind are Latin inscriptions, translated as follows :

“ Here are interred the remains of Robert, lord viscount Belhaven, baron of Spot, &c. and counsellor to king Charles, and most intimately in favour with him, because formerly he had been most dear to Henry, prince of Wales, and master of his horse. But he being dead, and Charles his brother now reigning, he was made chamberlain to the king's household, and enter-

tained with a singular degree of favour, and advanced to great honours and wealth. In his youth he enjoyed the sweet society of Nicolas Murray, daughter to the baron of Abercairney, his only wife, who lived with him not above eighteen months, and died in child-bed with her child. When grievous old age came upon him (as weary of bad times and customs), withdrawing himself from the noise of the court, he returned to his country. He nominated sir Archibald and sir Robert Douglasses, baronets, sons to his eldest brother, his heirs, dividing equally amongst them all his lands and goods, except some legacies, and they erected this monument to his memory as a token of their gratitude.

“ Nature supplied in him by sagacity what his mind wanted of education. He was inferior to none in a good capacity and candour; he would soon be angry, but was as soon calmed. This one thing he had in his life, which scarcely could be alike acceptable to all, for loyalty towards his prince, love to his country, kindness to his relations, and charity to the poor, he was singular. In prosperity he was meek and moderate, in adversity his constancy and magnanimity prevailed to his very end. He died at Edinburgh, the 14th day of January, and from the incarnation of the Messiah 1639, and of his age 66, being the third year above his great climacteric.”

The annexed view from the king's park shows the palace as well as the chapel of Holyrood-house, with the Calton Hill in the distance, surmounted by Nelson's Monument.

The view of the interior of the chapel, is taken from the east, and exhibits its present state of dilapidation.

Mr. John Petrie, of Edinburgh, has lately published a copious and interesting description of the monastery and chapel royal of Holyrood, from which we have made some extracts.

THE HOUSE OF COMMONS

IL PALAZZO PITTI
FIRENZE

PALACE OF HOLYROOD HOUSE.

THE Palace of Holyrood-house has had its history so blended with that of the Abbey, that it is now impossible to determine at what period of time, or by whom, the former was erected. It is probable, however, that the abbey is the most ancient of the two. There appears to have been an establishment here, independent of the abbey, as early as the time of Robert Bruce, and we find that most of the subsequent kings of Scotland made it their residence, or distinguished it by some remarkable transaction. Arnot and others date the origin of the palace from the reign of James V. who, we are told, “ in the spring of the year 1525, founded a fair palace in the abbey of Holyrood-house and three great towers,” intending it as a place of occasional residence. These towers form the north-west portion of the building, and the name of James may still be seen upon one of them.

The Palace having been destroyed by the English, from its ruins there arose a fairer and more extensive structure, consisting of five courts ; in this state the building continued till the greater part of it was burnt by the soldiers of Cromwell.

The present Palace of Holyrood-house was planned soon after the restoration, by sir William Bruce, an eminent architect of that period, and built by Robert Mylne. In 1745, the apartments erected by James V. were occupied by the pretender, and shortly afterwards by the duke of Cumberland, both of whom slept in the same bed. After this time little attention was paid to the Palace, till the barons of the exchequer, about thirty years ago, gave orders for a thorough repair, and it was soon afterwards appropriated to the use of the royal

exiles from France, who resided here for some years, and held frequent and brilliant levees. Upon their removal in the year 1799, their gratitude was expressed by a letter, addressed to the lord provost and magistrates, translated as follows :

“ Edinburgh, August 5, 1799.

“ Gentlemen,

“ Circumstances relative to the good of the service of the king, my brother, making it requisite that I should leave this country, where, during my residence I have constantly received the most distinguished marks of attention and regard, I should reproach myself were I to depart without expressing to its respective magistrates, and through them to the inhabitants at large, the grateful sense with which my heart is penetrated, for the noble manner in which they have seconded the generous hospitality of his Britannic majesty. I hope I shall have it in my power to make known, in happier moments, my feelings on this occasion, and express to you more fully the sentiments with which you have inspired me.

Signed, “ Charles Philip.”

The duke of Argyle and other noblemen have lodgings at the Palace by royal grants, and the towers of king James furnish a city residence to the family of Hamilton, the duke being hereditary keeper.

The present Palace is a quadrangle, inclosing a court ninety-four feet square ; its buildings are all four stories in height besides the attic, with the exception of the western side, which is only two stories ; this side of the quadrangle contains the grand entrance, and is likewise distinguished by a double ballustrade and a flat roof ; at each of its extremities is a castellated square tower, strengthened on its exterior angles by round towers of elegant dimensions. The great entrance is composed of four Doric columns with a corresponding entablature, under which appear the royal arms

of Scotland, the whole is surmounted by an octangular turret, terminated by an imperial crown. On the opposite or eastern side of the quadrangle within the court, is a pediment containing the arms which have been assumed since the Union; the court is surrounded by a piazza, having Doric pilasters and an entablature ornamented with the thistle, crown, and other ensigns of Scottish royalty; between the windows on the second floor is a range of Ionic pilasters, and above these an equal number of the Corinthian order; a large staircase on the right hand leads to the royal apartments, and on the north side is the great gallery, which is 150 feet long. This gallery is hung with the fanciful portraits of one hundred and eleven monarchs of Scotland, painted by De Witt, these were wantonly defaced and mangled by the troops that were quartered here after the defeat of the royalists at Falkirk, in 1745. In this gallery the peers of Scotland are elected, and it is well suited to the dignity and splendour of such an occasion; it was likewise employed by the princes of France for the celebration of mass.

The apartments occupied by the duke of Hamilton fill the old portion of the Palace. On the second floor are those which were used by queen Mary, whose bed still remains. The furniture of this bed is of crimson damask, bordered with green silk tassels and fringes, and tradition assigns the decorations to the fair hands of the unfortunate queen; but the whole is now in a very decayed state. There are likewise some old chairs, covered with crimson velvet; in this room a small opening is to be seen which leads to a trap-stair, communicating with the apartment below. By this passage, Darnley and his accomplices conveyed themselves into the closet in which Mary was snuping with Rizzio her secretary, who was dragged out of that closet through the bed-chamber into the chamber of presence, and there expired under repeated blows. Large dark spots near the outer door of this room, are said to be the indelible stains of his blood. The armour of Darnley and

his son, and the boots, in shape and size the prototypes of those now worn by the horse guards, with the queen's dressing box, are still shewn in these apartments. Here are besides some very good portraits ; one of Henry Darnley, or, according to Pennant, Henry Prince of Wales, Queen Mary, Charles II. Cardinal Beaton, and John Knox, &c.

The Palace of Holyrood is thought to resemble that of Hampton Court. It is the only royal habitation in Scotland that is not in ruins. Its environs still afford the singular privilege of an asylum to debtors ; but this privilege may have been derived from the Abbey rather than from the Palace ; for it is well known from history, that the cardinals for ages pretended that they had the privilege (as formerly the vestal virgins of Rome), of giving grace to the criminal, whom by chance they might meet on his way to the place of execution. In 1309, we find the cardinal de St. Eusebe, rescuing such a victim in the Rue d'Aubri le Bouchor, in Paris : and if the power of the religious extended in those days to the rescuing from capital punishments, there is no reason to imagine it ineffectual in protection from a suit for a common debt.

EDINBURGH, SCOTLAND

W. & A. G. 1840

HUME'S MONUMENT.

ON the south-west end of the Calton Hill is a cemetery, in which are deposited the ashes of the celebrated David Hume, and a Monument is raised over them to his memory. This structure is of a circular form, in the Grecian style, and 20 feet in diameter by about 30 feet high. The top of the wall by which the roof is concealed, is enriched by a Doric entablature, and the building further down is encompassed with a belt and cornice. On the south and north sides two pedestals, which are 10 feet high and 5 wide, support the same number of sphinxes. Carved in a stone pannel over the door, which fronts the north-east, is this inscription: "David Hume, Born April 26th, 1711—Died August 25th, 1776. Erected in memory of him in 1778." Above this again is a niche, containing a vase, which was lately placed there by the nephew of the philosopher as a memorial of his own wife, and which has on it the following words: "*Janae Alder, feminae benignae optimae, uxori suavissimae, hanc urnam felicitis conjugii memor, posuit David Hume, A. D. 1817.*"

David Hume, the best probably of the historians of his country, and the most ingenious of its sceptical writers, was the youngest son of a family which could boast an ancient and noble genealogy. He studied at the university of Edinburgh, and was intended for the bar, but never put on the gown. The writings of Locke being then in great repute, Hume was induced to turn his attention to metaphysical studies, the results of which he gave to the world at different times in his "History of Human Nature," and his "Essays," &c. These works were variously received, but none of them so favourably

as his Political Discourse, and his History of England. His sceptical tenets as to the existence of matter and mind, which he resolves into ideas and impressions, have been well exposed by Reid and Stewart, and his objections to revealed religion, most satisfactorily and unanswerably repelled by Drs. Campbell, Beattie, and others.

After spending most of his patrimony in his earlier and more unsuccessful productions, Hume went to reside a year with the Marquis of Annandale. He was afterwards employed in several very important civil and diplomatic services. By these means, realizing a fortune of £1000 a year, he retired in 1769 to spend the remainder of his life in his native country, where he died in 1776.

An account of his death was published in a letter written by Dr. Adam Smith, whose object was to show, that notwithstanding the sceptical opinion of Hume, he died with the utmost composure ; and that in his life as well as at his death, he appeared the wisest and best of men. The absurdities of this letter were ably exposed by Dr. Horne, in a small volume, on the “ Life, Death, and Philosophy of David Hume,” which is better calculated than almost any other book to guard the minds of youth against the insidious strokes of infidelity : indeed, the presumption and extravagant affectation could not have been too strongly reprobated, which induced Hume on the near approach of death, to compose a dialogue between himself and the ferryman of Styx.

The following *jeu d'esprit* is not generally known :

Epitaph.

“ Within this circular Idea,
 “ Called vulgarly a tomb,
 “ The Impressions and Ideas rest
 “ That constituted Hume.”

INVERESK CHURCH.

INVERESK is a beautiful village five or six miles from Edinburgh : it is situated on the lower part of the river Esk, which falls in two streams from the mountains of Morfit and Pentland, that bound the great vale of Midlothian. These streams flow together through the valley, and are intercepted in their course by the hill upon which stands the church and village of Inveresk. The situation of this parish is esteemed the most beautiful of any in North Britain ; the south side of the hill, taking the form of a crescent, displays a delightful prospect over the woods of Dalkeith, and the extensive country to the south. So peculiarly healthy is Inveresk, that it anciently obtained the name of the Montpellier of Scotland : the soil being remarkably dry, and the constant freshness derived from the river and the adjacent sea, constitutes a softness and amenity in the air, that is rarely experienced in any other situation in this northern climate. According to some historians, the Romans had a station on the summit of the hill, where in aftertimes a church was erected ; but at what precise date is not to be ascertained.

The foundation stone of the present fabric was laid on the 16th September, 1803, by the master of the Musselburgh Kil-winning lodge, accompanied by a deputation from several lodges in the city and its neighbourhood. The external appearance of the building is rather plain ; it has a lofty tower and spire, and being situated upon the summit of the hill, is a very conspicuous and pleasing object.

A sermon was preached in the old church of Inveresk in the year 1748, upon an occasion so memorable, that it cannot fail to interest the majority of readers. An abandoned woman,

INVERESK CHURCH.

named Margaret Dickson, was sentenced to be hanged in the Grass Market, Edinburgh, for the murder of her own child; after being cut down, she was thrown into a chest, in order to be taken to Musselburgh for interment. In the way thither, the people who accompanied the cart, stopping some time at a place called Pepper Mill to refresh themselves, were alarmed by one in the company, who affirmed, that he felt some motion in the chest; whereupon it was immediately broken open, and her friends caused a vein to be opened, and gave her some spirits; these operations were attended with such symptoms, that they soon anticipated her perfect recovery. She was taken the same evening to Musselburgh, and so far revived, that before the following day, she sat up and spoke to the company, and shortly afterwards was in perfect health. It was conjectured, that the motion of the cart whereon she lay, provoked a renewed circulation of the blood, and led primarily to her recovery. The sermon was preached by the Rev. Mr. Williamson, before a very numerous auditory; the immediate subject of the address was likewise present. A short time afterwards, the woman having occasion to visit Edinburgh, such an immense body of people were attracted to see, as it were, one alive from the dead, that she was in danger of being stifled by the pressure, and was obliged to take refuge in a dwelling, and finally to escape by a back door. She kept an ale house for many years after this event in the neighbourhood of Inveresk, and at length died as she had lived, an impenitent profligate.

KYOTE HOUSE.

HOUSE OF JOHN KNOX.

THE house of this eminent person has, in this advanced age, a singularly mean appearance, being situated in a part of the Old Town, inhabited by the inferior ranks of society, and is distinguished by a small effigy of the reformer occupying a pulpit on one of its angles. Many houses in this neighbourhood, remarkable solely for their great age, and still greater deformity, were, nevertheless, the dwellings of our ancestors most distinguished for rank and literature; but when we contemplate the venerable residence of the great Scottish Reformer, the associations recalled to mind are flattering to our pride, and are highly honourable to his memory. We think less of the greatness of his power, and his intimacy and influence with his most illustrious contemporaries, than of his unadorned plainness of character, and unaffected humility.

John Knox was born in the year 1505, at a place called Gifford, near Haddington. He was educated at the University of St. Andrews, where he obtained a degree in arts, and while very young exercised the profession of a teacher. Like the celebrated German Reformer, he imbibed in his youth the principles of the most bigotted Catholicism; but, hearing the discourses of a certain friar, he grew undecided in his opinions, and, finally, by the advice and representations of George Wishart, (an early martyr to the cause of Protestantism), he threw off his adherence to the Romish church, and became an ardent reformer. After a variety of trials and dangers, which he bore with singular patience and unshaken fortitude, he became a minister in Edinburgh, and so zealous was he in the discharge of his pastoral functions, that the highest rank was not exempted from

the most acrimonious reprehensions. A proof of this may be seen in his address to the queen, before whose council he was summoned on the following occasion. Certain of her Majesty's family who remained in the palace of Holyrood-house, had a priest, who performed service as usual in the chapel during her absence. Many papists resorting thither, the ministers were so offended that, at their instigation, the citizens of Edinburgh went down one day, when they were told the congregation was considerable, and being denied entrance, forced the gate; some of the auditors were taken and dragged to prison, but the priest escaped by a back way. Mary was so incensed at the indignity, that she determined not to return to the city till the perpetrators had undergone an exemplary punishment. Knox being considered the principal author of the tumult, was called before the council, and charged, among other things, with presuming to assemble the people from all quarters whenever he thought proper. After vindicating himself with great spirit, he addressed himself to the queen, and conjured her in the name of Almighty God, as she regarded the eternal welfare of her soul, to forsake the idolatrous religion she professed, and by her authority maintained against the statutes of the realm.

After a life of incredible hardships, during which he maintained the most unshaken integrity, Knox died in the year 1572, full of age and honours.

The dark side of his character, was an inflexible and an indiscriminating sternness, which never permitted him to attempt conversion by gentle means; but, it must never be forgotten, that had he not been of a temperament harsh in the extreme, he could never have accomplished the present work of reformation, in a period of a peculiarly dark and savage complexion. An eulogium pronounced over his grave, by the earl of Morton, (who was his friend), was highly characteristic of the man, and honourable to his memory, "Here lies a man who never knew fear."

TWILDSOE ALLEY.

THE TWILDSOE ALLEY.

LYING-IN HOSPITAL.

THIS building was formerly a private dwelling house, but is now appropriated for the reception of poor or unfortunate females, whose circumstances deprive them of proper assistance at their own houses. The situation of the house is extremely well adapted to the purposes for which it is intended, being well aired, and standing in the middle of a small park, removed from the noise and bustle of the street; it is chiefly under the care of the professor of midwifery in the university of Edinburgh. The business of the institution is managed by a president, four vice-presidents, and a number of directors, annually elected; and is supported by yearly subscriptions and donations.

Long before the establishment of the Lying-in Hospital, it appears, that attention had been paid to the necessities of patients, who required the gratuitous aid of midwifery. For in the year 1756, Dr. Thomas Young was appointed by the town-council, professor of midwifery in the University or College of Edinburgh; and he was the first established professor who gave lectures on his particular branch of practice. His plan was to give three courses in the year, each of which lasted about three months; they comprehended not only the practical part of midwifery, but the several diseases peculiar to women; likewise the management of new-born infants, and the disorders to which they are subject. To render this branch of education still more complete, the students had access, under certain regulations, to the lying-in ward, which was fitted up at the expense of Dr. Young, in the Royal Infirmary, and

there frequent opportunities were afforded them of practising in midwifery.

From the earliest ages to no great distance from our own times, midwifery was performed, perhaps, exclusively by women ; and there is every reason to believe, that those employed by the Hebrews, the Greeks, and the Romans, were all females. Nor do we meet with a single instance, of a surgical, or medical practitioner, having been had recourse to, and actually employed, earlier than the middle of the seventeenth century. Perhaps among the earliest practitioners on the continent, was M. Julian Clement, a surgeon of high reputation at Paris, who attended in a difficult case, Madame de la Valiere, in 1663, and Dr. William Harvey. The latter having published his celebrated treatise on generation, shortly afterwards engaged in the practice of midwifery, and followed up his practice with his *Exercitatio de Partu*.

MARLBOROUGH HOSPITAL

MARINERS' HOSPITAL, LEITH.

THE inhabitants of Leith were divided into four classes, and were erected into as many corporations by the queen dowager, Mary of Lorraine. These were the mariners, maltmen, traders, and traffickers : the first consisted of ship masters and sailors ; the second of malt makers and brewers ; the third of coopers, bakers, smiths, wrights, &c. and the fourth of merchants and shopkeepers. Of these corporations, the mariners are the most considerable ; they obtained from Mary of Lorraine, a gift, afterwards ratified by William and Mary, of one penny duty on the ton of goods in the harbour of Leith, for the support of their poor. This duty, which about the year 1760 did not amount to £40 per annum, in less than twenty years had increased to above £100 a year, and must still be augmented in proportion as trade flourishes : for the further support of the poor belonging to the corporation, the ship masters pay annually sixpence in the pound out of their own wages, and the like sum they give out of the wages of their sailors. From these sums, and from property acquired and money lent from former savings, this corporation has been enabled to devote a very considerable sum for the yearly support of their poor.

The mariners formerly occupied, as their hospital, a large house standing opposite to South Leith Church, called the Trinity Hospital, because originally consecrated to the Holy Trinity. In this house some of the poor were maintained, but afterwards they were all out pensioners. The Trinity Hospital, besides other apartments, contained a large hall for

MARINERS' HOSPITAL, LEITH.

the meetings of the corporation. In the room of this Hospital, an elegant edifice was erected in 1817, in the Grecian style of architecture, at the expense of £2500, and is a very considerable ornament to the Kirkgate: the pediment contains an ingenious device, consisting of the globes, quadrant, and other instruments used in navigation. Below it is placed a stone, which was removed from the ancient Trinity House, having this inscription, “ In the name of the Lord we masteris and marenelis bylis this hous to the pour, anno 1555.”

The streets of Leith are in general extremely narrow, and laid down without any regard to design or regularity, and the buildings for the most part are of mean appearance; but the streets which have been newly built towards the south and east, contain a number of houses which are finished with much taste and elegance. The Kirkgate is the principal street, and is entered at the foot of the great road leading from Edinburgh, called Leith Walk. The Hospital is situated on the west side of the street.

MERCHANT'S BLIND HOSPITAL.

MERCHANTS' MAIDEN HOSPITAL.

THE MAIDENS' HOSPITAL was founded in the year 1695, by the company of merchants of Edinburgh, and other well disposed persons, for the education and maintenance of poor children, the daughters of decayed burghers. It was originally instituted without the Bristow Port, where Mrs. Mary Erskine, who was one of the principal promoters of this charitable work, purchased a handsome and convenient building, with large and pleasant gardens, at the expence of 12,000 merks Scottish. The governors, who were at first all the contributors, held a meeting in 1697, for the formation of rules for the government of their establishment ; these were again revised in 1702, and two years afterwards an application was made to the town-council of Edinburgh, for a ratification of their proceedings ; they likewise had recourse to Parliament, who erected them into a body corporate in 1707. Their charter declares, " the said hospital in all time coming, to be a free hospital, and the great lodgings, houses, yards, and pertinants thereof in Bristow, purchased and doted for the use of the said hospital, by the said Mary Erskine, to be free of all public burdens whatsoever, for the pious uses abovementioned, with power to the governors thereof, not only to administer the funds and rents of the said hospital, with all donations already made, but likewise to purchase and procure lands and tenements, for the use, benefit, and advantage of the said hospital ; and for that effect to make and grant all manner of writs, deeds, and securities, and to have and to use a common seal with such inscriptions as the governors shall think fit, for confirmation of the said writs and deeds." By the statutes of the hospital, agreed on

MERCHANT'S MAIDEN HOSPITAL.

in 1708, a benefactor, who gave the sum of 2000 merks, was entitled to a right of presentation ; but in 1718, the qualification was increased to 3600 merks.

The building represented in the plate, stands in Bristow Street, and has nothing particular in its appearance to attract attention ; it having long been considered incommodious and unfit for the purpose, the foundation of a new erection was laid on the 2d of August, 1816 ; this edifice, which is in the Grecian style, stands on a gently rising ground to the west of Lauriston Lane, in the meadows, on the south side of the city. The girls, at this time about eighty in number, are taken in from seven to eleven years of age ; they are taught English, writing, arithmetic, geography, French, and needle work ; if any other branches of education are required, the friends of the girls are expected to pay the extra expenses. The clothing is respectable, and the diet of the best quality ; on leaving the house, each girl receives £9 : 6 : 8. The yearly revenue of the Hospital is estimated at £3000 sterling.

THE CASTLE OF DUNDEE

MERCHISTON TOWER.

THIS interesting building stands a little to the south-west of Gillespie's Hospital. The scenery in the neighbourhood is truly romantic and captivating, particularly from an eminence called Craiglockhart Hill; to the north-west of this commanding site may be seen the hill of Corstorphine, adorned with a number of gentlemen's seats with rich plantations. Two walls, which cross each other at right angles, were built on part of this hill by Mr. Keith, of Ravelston; each of the four angles containing a seat, from which may be enjoyed the most varied and delightful prospects.

Merchiston is worthy of attention, having been the residence of the celebrated author of the logarithms, John Napier, baron of Merchiston, who was born in the year 1550. Having given early discovery of great natural parts, his father was careful to have them cultivated by a liberal education. After going through the ordinary courses of philosophy at the university of St. Andrews, he made the tour of France, Italy, and Germany. Upon his return to his native country, his literature and other fine accomplishments soon rendered him conspicuous, and might have raised him to the highest offices in the state; but declining all civil employments, and the bustle of the court, he retired from the world to pursue literary researches, in which he made an uncommon progress.

He applied himself chiefly to the study of mathematics, but at the same time did not neglect that of the holy scriptures. In both these he discovered the most extensive knowledge and profound penetration. His essay upon the book of the Apocalypse, indicates the most acute investigation, and an

uncommon strength of judgment, though time has discovered, that his calculations concerning particular events had proceeded upon fallacious date. Napier having a great attachment to astronomy and spherical trigonometry, had occasion to make many numerical calculations, which being expressed in large numbers, occasioned a great deal of labour and trouble; to obviate which he contrived the logarithms, which he published in 1614.

Briggs, at that time professor of geometry at Gresham College, in London, and who afterwards improved upon the invention, addressed a letter to archbishop Usher upon the subject; in which he says, Napier, lord of Merchiston, hath set my head and hands at work with his new and admirable logarithms; I hope to see him this summer, if it please God; for I never saw a book which pleased me better, and made me more wonder. Accordingly, he paid him a visit, and being introduced, almost one quarter of an hour was spent in beholding each other, before one word was spoke; at last Briggs began, “My lord, I have undertaken this long journey, purposely to see your person, and to know by what engine of wit or ingenuity, you came first to think of this excellent help into astronomy, the logarithms: but, my lord, being by you found out, I wonder nobody else found it out before, when now known it is so easy.”

From the Architect, 1860, by J. H. Stoddard, 1860, p. 100.

NEW METHODIST CHURCH
Nicholson Square

THE METHODISTS' CHAPEL.

THIS beautiful structure was erected in 1814, and stands in the south-west corner of Nicholson's Square. The length of the building is about 80 feet, and its width 60 : attached to it is a very neat house, appropriated to the minister ; and under the chapel and house are some excellent rooms for sabbath schools.—The whole buildings cost upwards of £5000. The front is rendered extremely pleasant and picturesque by the shrubberies of the adjoining gardens ; besides which, the square has its centre enclosed with an iron railing, and is adorned with a plantation of trees.

This congregation had a chapel formerly in the low Calton, but it was taken down to make way for the erection of the Regent Bridge.

The Methodists in Great Britain form a very considerable part of the community. They first sprung up at Oxford in the year 1729, under Mr. Morgan and Mr. John Wesley. In the month of November of that year, John Wesley being then fellow of Lincoln college, began to spend some evenings in reading the Greek Testament, along with Charles Wesley, student, Mr. Morgan, commoner of Christ Church, and Mr. Kirkham, of Merton college. Next year two or three of the pupils of Mr. John Wesley obtained leave to attend these meetings. Two years after they were joined by Mr. Ingram of Queen's college, Mr. Broughton of Exeter, and Mr. James Hervey ; and in 1735 they were joined by the celebrated Mr. Whitfield, then in his eighteenth year. They soon obtained the name of Methodists from the exact regularity of their lives ;

but the name is now very commonly used in a reproachful sense, and applied by the irreligious to every person who manifests any zeal for the salvation of mankind. The heads of this party soon differing upon some religious points, distributed themselves into two parts ; the one under Mr. George Whitfield, the other under Messrs. John and Charles Wesley, and both were indefatigable in promoting their own views of the Christian religion.

The Wesleyan Methodists are now incorporated into a regular and compact body, and have adopted a system of church government which has a wonderful tendency to unite the members to each other. Their meetings for worship and business are of various kinds, and are distinguished into prayer meetings, class meetings, bond meetings, watch nights, love feasts, and yearly covenants : their church officers are denominated travelling preachers, local preachers, class leaders, prayer leaders, bond leaders, trustees, and stewards.

Several persons have written the life of Mr. Wesley ; and Mr. Whitfield's memoirs were drawn up by the late Dr. Gillies, of Glasgow.

ST. ANDREW'S CHURCH, ST. JOHN'S, N.S.W.

MUSSELBURGH TOLBOOTH.

MUSSELBURGH is a small village, which derives its name from an extensive muscle bank, which lies in the sea below the town, and was probably the principal cause of its early population. The muscle bank still affords great relief to the poorer inhabitants in times of scarcity, and supplies the tables of the more opulent, who have a taste for such food, with an agreeable variety. The parish takes a semi-circular form, upon the deepest bay of the Frith of Forth : the lowest part is only a few feet above the level of the sea, between which, and the towns of Musselburgh and Fisherrow, are very spacious and pleasant links. These beautiful downs, which are almost peculiar to the shores of Scotland, furnish a field for that favourite exercise called the golf, and excellent walks at all seasons of the year.

Musselburgh affords to Edinburgh a plentiful supply of fish, and from its proximity to the city, its freshness is almost insured; it is conveyed by the fisherman's wives, three of whom relieving each other at every hundred yards, will arrive at their market with a heavy load in the space of three quarters of an hour, the distance being about five miles. . In early times, the city was nearly furnished with vegetables from the gardens at Musselburgh and Fisherrow ; the nature of the soil is well calculated for early crops, and perhaps the skill derived from the example of the Roman colony, may have led the inhabitants to this branch of trade, which is still followed here, though the people are far from possessing that monopoly of garden stuffs which they had in former times.

The Tolbooth, which is one of those prisons which have

been so often complained of for their inconveniences of every kind, stands in the middle of the town : it has a high tower and spire ; the tower contains four stories, the lowermost of which is elevated above the roofs of the adjacent houses. This prison is reported to have been erected about the year 1590, out of the ruins of a building which stood at the east end of Musselburgh, and belonged to the abbacy of Dumfermline. This ancient structure was the first religious house in Scotland, whose ruins were applied to a prophane and unholy use, for which act, the people of Musselburgh have, till lately, been annually excommunicated at Rome. The stairs of the Tolbooth, which were repaired some years since, were evidently the bases of the column of some anterior building.

The bridge of Musselburgh, over which the Scottish army retreated on the day of the battle of Pinkie, is of very great antiquity, and was probably the work of the Romans, as they certainly had many houses in what is now called Fisherrow, as well as their haven for shipping ; and it is not likely that they would suffer their colony to be divided by a river that is frequently unfordable for many days together. There are two other bridges here, one of stone, the other of wood ; the latter is now seldom used.

THE TOWER OF THE TOWER OF THE TOWER

NELSON'S MONUMENT, CALTON HILL.

THIS elegant pillar, erected to commemorate the greatest of naval commanders, is likewise a monument of the patriotism and good taste of the citizens of Edinburgh: being situated on the most commanding point of the Calton Hill, it may be seen at a very considerable distance, in approaching the city, either by sea or by land; and is accounted one of its most prominent ornaments, especially when viewed from the extensive parade afforded by Princes Street.

It was designed by Mr. R. Burns, architect, who proceeded with its erection till the work was suspended, owing to a want of funds; Mr. Burns dying in the interim, it was resumed and completed by Mr. Dickson, in 1815. Its form is circular, rising from a broad basement, which is flanked by substantial embattled towers, and divided within into several apartments, which were originally intended for the accommodation of disabled seamen. Over the entrance, is the Nelson crest, the stern of the *San Josef* in bas-relief, taken most correctly from a drawing procured by the dean of guild, R. Johnson, esq.; the rooms are neatly furnished, and decorated with many tributes, which the sister arts of painting and poesy have consecrated to the memory of their unrivalled hero. The foundation of this pillar is 484 feet above the level of the sea at high water, and the column itself is upwards of 100 feet in height; the view from its summit, (where a flag is continually displayed), is of the most diversified and delightful kind, and is said not to be exceeded even by that of the bay of Naples. The lower part of the building, in deviation from its original purpose, is now occupied by the widow of a petty officer of the

navy, who is allowed to provide dinners and suppers for strangers, but not to sell wines or strong drink, this restriction, however, is of little avail, as those who are inclined to such indulgence may supply themselves from other quarters; a garden, which surrounds the building, supplies plenty of vegetables, with strawberries and other fruits in their season. A few of the most respectable of the citizens of Edinburgh have formed themselves into a society, called the Nelson Club, and dine here on the anniversaries of the hero's victories.

In one of the garden walks, a stone obliquely placed, exhibits the following very appropriate lines from Milton:

Hither shall all the valiant youth resort,
And from his memory inflame their breasts,
To matchless valour, and adventures high.

Upon a tablet immediately under the stern of the San Josef, which appears in bas-relief over the entrance to the building, is this inscription:

To the Memory of
Vice-Admiral
Horatio Lord Viscount Nelson,
And of the great Victory of Trafalgar,
Too dearly purchased with his blood,
The grateful citizens of Edinburgh
Have erected this Monument;
Not to express their unavailing Sorrow
For his death;
Nor yet to celebrate the matchless glories of
His life;
But, by his noble example,
To teach their Sons
To emulate what they admire,
And, like him, when duty requires it,
To die for their Country!
A. D. MDCCCV.

THE OLD SCHOOL HOUSE

BELLVUE, NOW THE CUSTOM HOUSE.

THIS elegant mansion is solitarily situated to the west of London Street, and at the northern termination of a line of streets running from St. Andrew's Square to the verge of the city. It was built by the late general Scott for a family residence, but has since been converted to its present use by the magistrates, who purchased it, together with the extensive pleasure grounds in its vicinity, for the annual feu of £1000, the present proprietor, however, reserving the right of redeeming it at the end of twenty years, on paying the sum to which the yearly rent would amount in that time.

It consists of four stories, one of them below ground. The front is adorned with a handsome porch, over which are the royal arms; the ground about it is enclosed by a railing, and tastefully laid out in walks and shrubberies. This spot is to be the centre of a number of diverging streets, which are already planned, to form another New-Town, surpassing the present in the grandeur and beauty of its architecture. From this quarter of the city, there is a most delightful view of the Forth with its adjacent scenery.

The office for the customs was at a remote period kept in the Parliament close, but more recently the back part of the Exchange was appropriated for its accommodation. Previously to the middle of the last century, the commissioners, five in number, had each a yearly salary of £1000, which about that time was reduced to half the sum. At present there are four commissioners.

BELLVUE, NOW THE CUSTOM HOUSE.

The produce of the customs of Scotland for the year ending January 5, 1804, was the following :

	£.	s.	d.
Gross receipts in money	729,694	14	4½
<i>Deductions.</i>			
1. Debentures, drawbacks, &c. 161,703	2	0½	
2. Charges of management ..	63,564	18	1½
	<hr/>		
	225,268	0	1½
Net produce	£504,426	14	2¾
	<hr/> <hr/>		

Of this sum £375,900 was remitted to the Exchequer of England; £58,016 : 5 : 3½ expended in the promotion of national objects; and £58,492 : 5 : 1¼ devoted to the service of his majesty's civil government in Scotland. The balance after these deductions remained in the hands of the receiver-general of the custom, or the collectors at the different ports.

THE BRIDGE

NORTH BRIDGE.

THE foundation stone of this Bridge was laid by George Drummond, Esq. Lord Provost of Edinburgh, on the 21st of October, 1763. The contractor, Mr. William Mylne (a brother of the eminent architect who built Blackfriars Bridge), engaged to complete the undertaking before November 1769, when two months before that period, the vaults and side walls on the south end of the Bridge fell in, burying five persons in the ruins. It is natural enough to conceive that this unfortunate event excited, in a high degree, the popular clamour against Mr. Mylne. The general cry was, that the builder's want of skill had occasioned the unhappy accident. There is reason to believe, that it was partly owing to the severity of the contract, which was obtained by the city on such terms, as could never have enabled the contractor to have performed his task in a sufficient and durable manner. It is but fair, however, to mention, that Mr. Mylne seems not to have considered minutely the circumstances of the ground on which the Bridge rested, as many asserted, that the fall of the Bridge was the natural consequence of the insufficiency of the foundation, which indeed could hardly have been too strong for the impending structure. The site on which it was erected was formerly the bed of a piece of water called the North Loch, which was drained with considerable labour and expense. The earth on which the foundation was laid, is stated to have been the common rubbish, collected by digging the foundations of the houses on the south of the Bridge, which for the sake of convenience was naturally deposited in the vale below. This not being cleared away, constituted, it may be supposed, a

most insecure foundation, being what is technically denominated travelled earth. The Bridge was soon repaired, and may now be considered a handsome, as well as a very durable one. The upper part serves as a communication between the Old and New Town. A considerable excitement was lately occasioned at Edinburgh, by the erection of houses on the side of the North Bridge; a general meeting of the inhabitants was held on the 2d of December, 1817, to consider what measures should be adopted to prevent, or lessen, the injury done to the city, by such a deviation from the original plan of the New Town. Seldom had there been seen on any occasion an assembly so numerous and respectable; more than 1000 gentlemen were present, and many were obliged to retire for want of room. A letter was read which had been addressed to the Lord Provost, requesting him to call the meeting, and his lordship's reply declining it, after which, a number of resolutions were agreed to, and among them the following.—“ That this meeting having obtained the opinion of eminent council, that the magistrates had no legal powers to authorize the erection of such buildings, as are now in progress on the west side of the North Bridge, resolve to take immediate legal steps to prevent their being further proceeded with, it being the understanding of this meeting, that no buildings higher than what may be necessary for a row of shops, can be permitted to be erected on the North Bridge, without serious injury to this city; and in order that all necessary steps might be taken, a committee of twenty gentlemen was nominated, legal proceedings were immediately taken, which were subsequently proposed to be withdrawn, on condition that the town council would agree that the buildings should rise no higher than fifteen feet above the causeway of the Bridge.” Notwithstanding these concessions, the houses are reared to the height of four stories, some of them having ornamented parapets, and though elegant in themselves, they obstruct several of the finest views in both the Old and New Town.

THE CHURCH OF THE HOLY TRINITY.

NORTH LEITH CHURCH.

THE town of Leith is divided by the water of Leith into two parts or parishes, the northern part being of more recent erection than the other. The ancient Church, which is yet standing, is a building of great antiquity, but is now so much decayed that it became necessary to erect a new one; accordingly, a plot of ground was selected in a large field, south-east of Leith Fort, and the foundation stone of the Church was laid with much ceremony in March 1814. Upon this occasion, the different public bodies who were to make up the procession assembled in the old church, and afterwards moved off to the ground, escorted by detachments of the Norfolk and Northampton regiments of militia. After an appropriate prayer, the stone was laid in due masonic style by the Rev. Dr. Johnstone, when the whole assembly gave three cheers, and a royal salute was fired from two field pieces, which were stationed at a short distance. The procession, which consisted of more than 500 persons, then returned, and the magistrates and principal gentry repaired to the Assembly Rooms, where they were regaled with a sumptuous dinner.

The Church was designed by Mr. Wm. Burn, and it is thus described by a writer in the *Scot's Magazine*. “The whole of the building appears to be a purely Grecian edifice fronting the east; and from the face of the columns to the back wall we find it in length one hundred and sixteen feet and a half; the extent of the front is rather more than seventy-eight feet and a half: the church is calculated to contain with convenience 2200 persons. The proportions of the portico are, in our opinion, taken from the little Ionic temple on the *Illyssus*, near

NORTH LEITH CHURCH.

to Athens, indeed it appears to be entirely similar. The first story of the steeple is Doric, the second is Ionic, and the third Corinthian. The spire is fluted, and its height from the ground to the top of the cross is one hundred and fifty-eight feet. The ceiling of the church is partly covered and partially ornamented, and the walls are plastered in imitation of stone. Even the minutest parts of this edifice, where design is requisite, appear to us to possess some affinity to Grecian buildings. The front of the gallery (in place of being pannelled like every common place church, is not pannelled at all like the uncommon church in Charlotte Square) possesses the regular entablature of the columns, which are Ionic and fluted; the pulpit also has Corinthian columns, and the top of it is classically finished with the entablature of the order, taken from the Temple of Lysicrates, which is certainly a very appropriate design for the purpose. The estimated sum for finishing the church and spire was only £8500; and although some additional expense has been incurred from the great depth of foundation, the total outlay, we are assured, will not exceed £9000. The work was undertaken by Mr. John Russel, builder in Leith."

THE OLD OBSERVATORY
Calton Hill

OBSERVATORY.

THE erection of an Observatory at Edinburgh for astronomical purposes, was first projected in the year 1736 ; but the commotion excited by the Porteous mob, occasioned the magistrates at that time to lay aside their intention, and apply themselves to matters more deeply interesting. Some years afterwards, the earl of Morton gave £100 towards the building of an Observatory, and appointed the celebrated Mr. Maclaurin, professor of mathematics, and others, as trustees for carrying the work into execution. Mr. Maclaurin, intent upon accomplishing the design, read a course of lectures on experimental philosophy, the money arising from which he appropriated for that purpose ; these sums amounting to about £300, a grant was obtained from the magistrates, of part of the south row of buildings in the upper part of the college, which were to be taken down, and the Observatory erected on their site ; but, Mr. Maclaurin dying, the design was abandoned.

About the year 1776, the money which had been collected for this purpose, with the accumulated interest, amounted to £400, and the plan for building an Observatory was again revived. A design was then made by Mr. Craig, architect, and the foundation stone of the present building was laid by Mr. Stodert, lord provost of Edinburgh, on the 25th of August, 1776.

Mr. Adam, the celebrated architect, happening at this time to be at Edinburgh, he conceived the idea of giving the whole the appearance of a fortification, for which its situation on the Calton Hill was very much adapted. Accordingly, a line was marked out for enclosing the limits of the Observatory with a

OBSERVATORY.

wall, constructed with buttresses and embrasures, and having Gothic towers at the angles. In the execution of this design, the money that had been raised was totally exhausted, and the building left unfinished, in which state it remained till 1792, when it was completed by the magistrates, but in a style far inferior to what the utility of such an institution deserved; it was possessed of no instruments, nor any funds for procuring them. It continued thus till the year 1812, when a society was formed for the establishment of a scientific Observatory, to be furnished with all the instruments required for the nicest observations of astronomy, and a new building was soon erected a little to the eastward of the old one. The directors, however, have not altogether neglected the latter; they have fitted up its higher story with a camera obscura, which forms the chief attraction to visitors. The room below contains a four feet achromatic telescope, some smaller ones, and a pair of twenty-one inch globes. The annexed View is taken from the promenade; in the distance appear some of the Pentland Hills.

WALLINGTON SCHOOL

ORPHAN HOSPITAL.

THIS institution was founded by some benevolent individuals, particularly Mr. Andrew Gardiner, a merchant, who commiserating the dreadful state of ignorance and vice in which those children were found, whose parents were either indigent or dead, raised a sum of money, by means of which he provided education and other comforts for a few of those objects. The success of their first efforts, encouraged them to project the erecting of an hospital for the maintenance of poor and destitute children. This design was made known in 1773, to several persons of rank, and to various associations, especially the Society for propagating Christian Knowledge, and met with universal approbation and countenance. A plan of the institution was subsequently framed, and rules made for its government. A subscription paper was circulated, which drew so large a sum, as to enable the managers in the month of November, 1733, to hire and furnish a house, and to receive into it thirty children, providing a matron and servants to take charge of them, and two masters, the one to instruct them in reading, writing, and the principles of religion, and the other to teach them the trade of weaving. For the further benefit of the undertaking, collections were made in the following year at the doors of the different places of worship in the city; and many provisions, and a variety of necessary articles were furnished by private contributions.

The managers now purchased a piece of ground, upon which the erection of the Hospital was commenced on the 28th of June, 1734. Though most of the materials and work had been gratuitously supplied, the expences of the edifice when completed

were £800. The proceedings were now laid before the magistrates and common council, who on the 22nd of January, 1735, formally expressed their approbation of them, and gave to the contributors a charter, by which they became possessed of the powers and privileges of a corporate body. In 1742, the managers obtained a charter of erection from government, by which their rights were extended and confirmed. On the institution of the Charity Work-house, which was intended for the city orphans, they were removed thither from the Orphan School, consequently much of the support which the old charity had received was withdrawn and bestowed on the new one; but the revenues, though necessarily impaired by this circumstance, were much augmented by Mr. Thomas Tod, treasurer, who also in other respects materially improved the Hospital; and by Mr. Scott Moncreiff, of Newhall, who subsequently filled the same office. By their exertions, and those of the respectable managers, this institution has reached a high degree of excellence, and proved how well it has merited the high eulogium of Howard, who pronounced it to be one of the most useful charities, as well as one of the most perfect of its kind, in Europe.

This building is situated between the theatre and lady Glenorchy's Chapel: besides the principal establishment, seen in the plate, there are apartments adjoining appropriated to the master; with a school room, a laundry, and an hospital for the sick.

An agreeable view of the Calton Hill is seen from the grounds, with the Monument of Nelson, and other recent erections.

THE GREAT PORTICO

WALKING UP THE STAIRS.

Manchester, 1840.

PARLIAMENT HOUSE.

THIS building occupies the west and a part of the south side of Parliament Square, the remaining portions of it being filled by St. Giles's Church, and by dwelling houses, remarkable for being twelve stories high behind, while they are only six in front. The Parliament House is an irregular structure, part of which was begun in 1631, and completed in 1640, at an expense of £11,600 sterling. The other part is of a much more recent date. The whole, which has been altered at different times, forms the figure of an L, and is 133 feet long by 98 broad, at its wider, and 60 in its narrower part. Owing to the depression of the back part of the site, the height of this side is 60, while that of the other is only 40 feet. A flight of steps called the back stairs, conducts from Cowgate and the back part of the Parliament House to the front of it. Entering by the principal door, we pass through a lobby, and are introduced into the great hall, an apartment which derives its chief claims to our attention, from its having once been the room in which the parliament assembled; it is 123 feet long by 49 wide, and has an arched inner roof of oak, supported by abutments, and ornamented with gilding and painting. It is now best known by the name of the outer house, as causes which come before the court of session are judged here before they pass into the inner house. Besides a marble statue of the late lord Melville, by the celebrated Canova, which was placed there very lately, the room is adorned with full-length portraits of king William the Third, his consort queen Mary, queen Ann, George the First, and John and Archibald, dukes of Argyle; the three first the productions

of sir Godfrey Kneller, and the others from the pencil of Mr. Aikman, of Cairney. In former times the parliament of Scotland, though consisting of three estates, sat in this one apartment; but the high throne for the sovereign, has been since displaced by a judges bench. The seats round the room, which were formerly occupied by the bishops and nobility, are now used by advocates and men who have business before the court, and solicitors fill the middle space, where there were at one time seats for the representatives of the counties and boroughs. This hall has undergone various changes, and is to be altered still farther; the judges here, or the lords ordinary as they are called, are to have recesses made for them, one of which is already finished.

Attached to the great hall are two chambers, one on each side, which are appropriated to the first and second divisions of the inner house. They are each about 40 feet square, and are furnished with seats for those on business, together with galleries for the spectators, and a robing room for the judges. The lord president and four other judges sit in the first division, the lord justice Clerk presides over the four judges in the second. A niche behind the chair of the president, is filled by a marble statue of the late lord president Blair, which was executed by Canova, and placed there at the same time with the erection of lord Melville's in the other house. The same artist was employed to superintend the removal of the statue of president Forbes, from its original place in the outer house, to its present situation over the seat of the lord justice Clerk. This statue, representing the judge in his robes, was done at the expence of the faculty of advocates by Roubiliac, and has under it the following inscription, "*Duncano Forbes de Culloden, supremæ in civilibus curiæ Praesidi, judici intergerrimo, civi optimo, priscae virtutis vivo, facultas juridica libens posuit, anno post obitum C. N. M, DCC, LII.*" Six of the judges, of whom there are in all fifteen, are also lords of justiciary, and go the circuits twice a year. In this capacity

their dress is different from that of the lords of session, the former being a crimson silk robe faced with ermine, and the latter consisting of a purple robe, turned up with crimson velvet.

Above these rooms are those for the use of the exchequer, consisting of a court-room and a variety of offices. Under ground there are six apartments, in two of which the public records used to be kept prior to the erection of the Register Office. The other four are devoted to the accommodation of the advocates library. This library, founded by sir George Mackenzie, lord advocate, now consists of 60,000 printed volumes, besides a numerous collection of valuable manuscripts. At first it depended for its enlargement chiefly on donations, of which it contains some that are princely. Now, however, it has regular resources, as every advocate has to pay a certain sum, and as along with the universities it receives a copy of every work entered in Stationers' Hall. Besides the books and manuscripts, this library is furnished with a collection of prints, a great variety of coins and medals, and with an entire mummy, preserved in its original chest, which the earl of Morton, the lord register of Scotland, presented to the faculty, having paid for it £300. Of this library, the first regular catalogue was made out in the year 1472, by the celebrated grammarian Ruddiman, assisted by Mr. Walter Goodall, both of whom were librarians. A second was printed in 1776, by Mr. Alexander Brown, in which the later accessions to the library were mentioned. Both of them follow the plan of the *bibliotheca card. imperialis*. It may not be useless here to state, that David Hume was for some time keeper of this library. As these rooms are under the hall where the parliament sat, it is expressly stated, in the gift from the city to the faculty, that they are liable to a search by the lord high constable of Scotland, a measure of security which took its rise from the Gunpowder Plot.

In the middle of the square there is an excellent equestrian

statue in metal of the second Charles, in the Roman dress, and holding a truncheon in the right hand. It is not known who executed this masterpiece of statuary. In 1685, it was elevated on a pedestal at the expence of the citizens. When some rubbish was removing in 1816 from the Parliament House, two stones were found, containing the following lines, now inscribed on the pedestal, for which they seem to have been originally designed.

Augustissimo magnificentissimo

Carolo Secundo

Britanniarum Galliarum et Hiberniae Monarchae

Invictissimo

Cujus natalitiis Providentiae arrisit divina,
 Asterisco meridiano eodem momento conspicua,
 Qui postquam adolescentiam in acie sub patre egisset,
 Illo demum obtruncato, jus suum per biennium
 Strenue quidem sed improspere vindicavit,
 Rebellioni namque saepius victrici impar,
 Solum prope per decennium vertere coactus est,
 In exteris autem regionibus divinis excubiis
 (Pactis dolis, minis, armis incubatoriis
 Non obstantibus) munitus et custoditus,
 Instar Solis tandem clarioris, e nubibus
 In regna sua sine caede ex postliminis reversus,
 Ecclesiam, politiam, civilem pacem, commercium
 Erexit, auxit, firmavit, et stabilivit :
 Bello deinde Batavico insignis, statim devenit
 Inter bellantes vicinos, belli pacisque arbiter :
 Rebellionem denique pristina nuper repullulante,
 Palladis non Martis ministeris Basiliscum
 In ipso ovo compressit, contudit, et conculcavit,
 Huic ergo miroculorum principi suma in pace et gloria.

PHYSICIANS' HALL

Queen Street.

PHYSICIANS' HALL.

THE PHYSICIANS' HALL, which stands in George Street, nearly opposite to St. Andrew's Church, was founded in November, 1775, after a design by Craig, the architect, who planned the New Town. The foundation stone was laid by that ornament to medical science, Dr. Cullen, attended by the other members of the faculty. The edifice in front extends to upwards of 80 feet, having a portico supported by four beautiful columns of the Corinthian order, which project about six feet from the wall. The base upon which these columns are elevated, rises about seven feet above the level of the street; the ascent to it is by a flight of steps, 30 feet in width. The under floor is principally occupied by a librarian and porter, attached to the institution. The chief apartments are those devoted to the usual meetings of the college, the accommodation of the library, and various articles interesting to the profession; this last room is upwards of 50 feet long by 30 broad, and 20 feet high, being encompassed on three sides by a gallery, and lighted by two rows of windows, five in each row; besides these, there are several other apartments, which the members of the society resort to for the purposes of writing, or reading such books as they are unwilling to take out of the Hall.

The library is esteemed a good one, but is particularly rich in the department of natural history, most of the books relating to which were presented to the society by the heir of Dr. Wright, of Kersie; the latter having, before his death, expressed a wish, that such should be their destination.

The medical school cannot be said to have flourished in Scotland, previously to the commencement of the 18th century;

till then, the public were the dupes of ignorant and presumptuous empirics, who were numerous enough at that time to infest all Europe. Before the days of the first Monro, we know of no medical person of any eminence ; from his time the science made rapid progress, and now the medical school of Edinburgh is the most celebrated in Europe.

It may be regarded as the principal nursery, which has furnished our army and navy for many years, with the ablest practitioners in the world ; and multitudes annually repair to it from every quarter of the globe.

THE PRISONS, CALTON HILL.

PREVIOUSLY to the erection of the Bridewell on the Calton Hill, a similar establishment existed in the city of Edinburgh, under the name of the House of Correction, but this in process of time, becoming insufficient for the increased population, a new erection was projected, which was completed in the year 1796. The building is of a semi-circular form, and was erected after a design by the celebrated Robert Adam; it consists of five stories, the upper one is used as an hospital and for store rooms. A passage divides the semi-circular part of the building exactly in the middle; on each side are the apartments; those on the outside of the circle being smaller than those within, are double in number, and occupied as separate bed chambers.

The rooms of the inner side, of which there are thirteen on each floor, are allotted for labour. They have a grating in front, opening to an inner court; in the centre of which is a watch-tower, which has on its second story, an apartment fitted up with several long and narrow windows, and being circular, the inspector has a complete view of every thing that is passing in the working cells, without being discerned himself. This arrangement of the building is also very convenient for another purpose; for on the outside of the watch-tower, in the court, is the pulpit, from which the minister may be distinctly seen and heard by all the prisoners, whilst they continue in their respective apartments, and thus the whole forms an excellent and most commodious chapel.

The prisoners are principally employed in weaving woollen, cotton, and linen, and they are kept in a comfortable state of

THE PRISONS, CALTON HILL.

warmth by means of flues ; those who have been bred to handicraft trades are employed about the prison, as carpenters, painters, &c. the garden is also cultivated by the prisoners, all the bedding, and every article of clothing used here is manufactured within the walls ; some of the more trusty females are occupied in cooking and washing.

Immediately on the east side of Bridewell stands the gaol or New Prison. It was founded in September 1815, and finished for the reception of offenders in September 1817 ; the plan of this structure is very similar to that of Horsemonger Lane, in London ; the ground floor is divided into seven compartments, each containing a good day room and a court yard ; the yards meet at a point, at which is placed an octangular watch-house. Above this, on a steep hill impending over the prison is the governor's house, from which there is a view into the several yards, though not into the day rooms ; of the seven compartments, one is occupied as an infirmary ; others by the women prisoners ; debtors ; and untried men ; and the remaining three by male convicts. In the upper stories of the building are the night cells, ranged on both sides of long galleries ; some of these are allotted to prisoners under sentence of death, and are distinguished by a long iron bar fixed in the wall, to which these miserable wretches are fastened by chains. Mr. Garney remarks, " that the gaoler considers this provision necessary to his safety ; the experience, however, of almost all other prisons, is sufficient to prove him mistaken, and so cruel a mode of confinement appears to be particularly objectionable in Scotland, because in that country six weeks elapse in capital causes between condemnation and execution." It is to be hoped, that the Bible, which is so laudably placed in the cell of every prisoner here, will have its due influence upon the keepers, and that they will act consistently with that admonition, which cannot be too frequently repeated, " Blessed are the merciful, for they shall obtain mercy."

Printed by J. B. B. & Co., 111. 11th St. N. W. D. C.

PUBLIC DISPENSARY.

PUBLIC DISPENSARY.

It is allowed, that no place of its extent, displays so great a number of charitable institutions as the city of Edinburgh. After the establishment of the Infirmary and Medical Schools, it was regretted by many, and especially by the students of Medicine, that a Dispensary was still wanted to complete the system of relief already afforded to the necessitous ; for while hospitals and infirmaries were calculated to receive and succour those who were incapable of exercise, and in many instances confined to their beds, there were other cases, in which air and exercise were highly beneficial, and these could not be attended to without the institution of a Dispensary.

The present establishment was projected by Dr. Andrew Duncan, now professor of the theory of physic in the University of Edinburgh. It was founded in the year 1766, and stands on the south side of north Richmond Street, and though not remarkable for its architecture, it is sufficiently convenient for the purposes of its erection. Over the entrance is represented, in alto-relievo, the story of the good Samaritan, with this inscription : “ And when he saw him, he had compassion on him.” Luke, x, 33. The patients who attend here, receive medicine and advice four days in the week ; they are recommended by the minister or elder of the parish where they reside.

The concerns of the dispensary are managed by a president, two vice-presidents, and twenty directors, annually elected from among the contributors, all the expenses being defrayed by voluntary contributions ; the donation of one guinea entitles to recommend patients, and to exercise the office of governor

PUBLIC DISPENSARY.

for two years ; a gift of five guineas confers the same privileges for life. Surgeons attend at stated periods for the vaccine innoculation of the children of the poor.

An account is kept at the dispensary, of the state of every disease that occurs ; and to the case are subjoined regular reports of its progress during the patients attendance. In the year 1815, a branch of this useful and benevolent institution was established in the Physicians' Hall, in the New Town, for the better accommodation of persons residing in the northern districts of the city ; in the following year the Edinburgh New Town Dispensary was founded, in Little King Street, where advice and medicine are not only given daily, but attendance at the patient's house is allowed when requisite.

ROGIER LATOET

REGENT BRIDGE.

THIS Bridge was erected for the purpose of connecting Princes Street with the Calton Hill, and forming a communication with the London new road. It consists of one spacious arch, which stretches over the lower Calton, affording an easy access to the charming walks and views, which may be enjoyed in this part of the town; it likewise gives additional length to the very extensive terrace of Princes Street, and as the approach to Edinburgh from London is intended to be by this bridge, a most prepossessing idea will be conveyed of the boasted metropolis of Scotland, to strangers who visit it for the first time from this entrance. The bridge is ornamented on either side, as far as the arch extends, by a handsome Grecian parapet, in form of a colonnade, having a circular opening in its centre; above this, on one side, is inscribed "Regent Bridge," and on the other, "Commenced in the ever memorable 1815, Sir John Marjoribanks of Lees, Baronet, M. P. Lord Provost of the City; Archibald Elliot, Architect." These inscriptions being upon the inner parts of the parapet, may be read in crossing the bridge. The city of Edinburgh is much indebted to the provost already named, for many of the improvements which it has lately received. Besides his exertions in Parliament, he liberally assisted by his private purse in promoting a plan, which forty years ago had been suggested by that eminent architect Robert Adam, and is now realized in the construction of the Regent Bridge.

It is intended to cover this bridge with buildings in the same manner as the South bridge, leaving the openings formed by the colonnade, for the sake of the prospect which is presented on

REGENT BRIDGE.

either hand. The houses, some of which have been erected, are to be used as shops, dwelling houses, and for the accommodation of public institutions. A large edifice, at the further end, and on the left side of the bridge as we advance towards the Calton-hill, is to be appropriated as an inn, to be called the Waterloo tavern and hotel. This inn is expected, when finished, to be one of the most commodious and elegant in the kingdom ; its construction is estimated at £20,000, which has been already subscribed in shares. Opposite to this it is proposed to erect a building for the use of the post office. Further on, and on the left hand, a house, in which the corporation of Calton are to hold their meetings, is nearly completed ; corresponding to which, on the right, a wall of hewn stone, with niches at regular distances from each other, stretches between the intended post office and the gaol, serving to fence the adjoining cemetery. It was at one time proposed to raise a triumphal arch at this part of the Bridge, and some progress was made in the execution of the design, but it has since been abandoned.

The view which we have given is taken from low Calton, and it was drawn in 1817, before the completion of the Bridge. Part of Leith Street is seen through the arch.

RECENT MURRAY'S HOUSE.

REGENT MURRAY'S HOUSE.

THIS ancient mansion stands in the Canongate, on the south side of the street, and is at present occupied as a dwelling and warehouse by Mr. Cowan, an eminent paper maker, and lately one of the magistrates of Edinburgh ; it was some time since used as a linen hall, and afterwards as the British linen company's bank. The period of its first erection, cannot now be accurately ascertained ; above one of the doors on the right side of the court as entered from the street, are the remains of an inscription, and in all probability a date, but so much obliterated, that it is impossible now to read it : on the top of one of the windows is a monogram, indicative of the name of Murray.

The house contains several splendid apartments, and behind it is a spacious garden, consisting of four parterres ; each of the three lower ones are descended to by a flight of steps : on the south-west corner of the first or highest parterre, which is immediately behind the house, is a very curious arbour, composed of three or four highly picturesque elm stumps, whose branches have completely incorporated and grown together. Under these (as tradition reports), Queen Mary used frequently to read.

On the east side of the lowermost level of the garden, stands an unroofed oblong building, twenty-one feet by nine, having an archway at each end, and three others on its front ; this ruined building is said to have been the place where the Union of the two Kingdoms was signed. Opposite to this building, there was formerly a fish pond, and on its bank, the statue of a boy in the act of angling ; the pond is now converted into a well for the use of a family, but the statue still remains reclining against

the hoary trunk of a fine birch tree, which at one time must have overhung the pool. The garden and back parts of the house, bear evident marks of its ancient grandeur. The place is still the property of the earl of Murray.

In 1561 James Stewart, prior of St. Andrew's, was created earl of Murray by queen Mary, and acted a very considerable part towards the close of her unsettled reign. He held the first rank in public affairs, not from any affection that the queen entertained for him, but on account of the frequent occasion she had for his advice and friendship, he being considered as the head of the reformers.

The queen being brought to Edinburgh in 1567, overwhelmed with ignominy on account of the murder of Darnley, was soon prevailed upon to resign the crown, and the regency was bestowed upon the earl of Murray. In consequence of his attachment to the reformation, he had many enemies, and his rule was of short duration : for on the 23d of January, 1570, he was basely murdered by one of the family of Hamilton. His character is most favourably drawn by the historians of his country : Melvil calls him the " good Regent ;" and another writer says, above all his virtues, which were not a few, he shined in piety towards God."

Engraved by J. G. Macdonald from a drawing by J. G. Macdonald.

THE CITY HALL, GLASGOW.

THE REGISTER OFFICE.

THIS building is situated at the end of the North Bridge, in Princes Street; it was formerly a very striking object in passing from the Old to the New Town, but it is now almost hid by the houses lately erected on the Bridge.

The plan of this building was designed by Mr. Robert Adam, and the foundation stone was laid on the 17th of June, 1774. In order to carry on the work, a grant was obtained from George III. by the earl of Morton, to the amount of £12,000, out of the money arising from the sale of the forfeited estates. The ceremony of laying the foundation was performed under a discharge of artillery, in presence of the judges of the courts of session and exchequer, and a brass plate was placed in the stone, having this inscription: “*Conservandis Tabulis Publicis, positum est anno MDCCLXXIV. munificentia optimi et pictissimi principis, Georgii Tertii;*” a glass vase was likewise enclosed, in which were deposited the different coins of his late majesty.

The building, as it now appears, is only one half of the original design, and consists of a front, ranging from east to west, about 200 feet in length, with a moiety of each wing; the breadth, including the dome, is 120 feet, and as there is sufficient room for the records, an extension of the edifice is not likely to take place at present. The dome, which occupies the centre of the building, is fifty feet in diameter, and eighty in height; it is lighted from the top by a window, fifteen feet in diameter, the frame of which is of copper. Under the dome stands a fine statue of George III. executed by the honourable Mrs. Damer.

THE REGISTER OFFICE.

At each angle of the front of the building is a small projection, with a Venetian window ; and on the top, a beautiful stone balustrade with a cupola ; in the centre is a pediment, supported by four Corinthian pilasters : the whole front is ornamented with a fine entablature of the same order, and the grand outer staircase is peculiarly elegant. In the walls, within the building, are numerous arched divisions, disposed into presses, for holding the records ; the access to these is by a hanging gallery, which encircles the whole edifice. The lord register has the chief direction of the business carried on in this office, and the principal clerks of the court of session are his deputies ; these have a number of inferior clerks under them, for carrying on the affairs of the court of session, and other concerns which belong to the institution.

The internal arrangements of this office have recently been much improved, and every thing connected with the order and preservation of the public records, put on the best establishment, under the superintendence of Thomas Thompson, esq. advocate. The erection of the Register Office cost nearly £40,000.

THE TEMPLE OF BEL.
PALMYRA.

RESTALRIG CHURCH.

THIS venerable ruin is situated in a hollow plain, about a mile eastward of Edinburgh ; it was founded by James III. in honor of the Trinity and the Virgin Mary, and was endowed by the two monarchs who were his immediate successors. James V. placed here a dean, nine prebendaries, and two singing boys ; but at the reformation, an order was giving by the general assembly for its demolition. But, notwithstanding this mandate, which declared the fabric to be a monument of idolatry, a beautiful window at the east end, and some of the walls, are yet standing. The cemetery around the ruined church is used as a burying place, principally by the English, and such as are of the episcopal communion.

In the middle of the church-yard, stands a large mausoleum, of an octangular form, overgrown with yew trees ; this appears on the left side of the print ; within the tomb, in the centre, is a small column, from which rise a number of ribs that form the groining of the roof ; the ground is covered with enclosures of wood, which mark the spots where bodies have been interred. This spacious mausoleum was originally the family vault of sir Robert Logane, of Restalrig, knt. (or as it was anciently denominated Lestalrig) ; it afterwards became the property of the lords of Balmerino, and from them passed to the earl of Moray.

In this vault, there are the remains of persons who have been interred some hundred years, particularly lady Jonet Ker lady Restalrig, who died May 15th, 1526. Restalrig Church being divested of its parochial right, which was conferred on the church of South Leith, its inhabitants were enjoined to

RESTALRIG CHURCH.

repair to Leith for the purposes of public worship ; the parsonage, benefice, glebe, parsonage-house, &c. of Restalrig, were likewise annexed for the support of the incumbent at South Leith, and the patronage of the new church was ordered to be reserved to the patron of that which had been suppressed, and to his successors.

This endowment of the church at Leith, was confirmed by a charter of James VI. in the year 1614 ; an extract from which will shew what kind of emoluments the clergy received in those times.

“ Moreover know ye, that for several good causes and considerations us thereunto moving, we have given and granted, and by this our present charter, confirmed to the minister, elders, and deacons of the church session, of South Leith, and their successors in the said office, all the lands, tenements, houses, buildings, gardens, orchards, crofts, churches, chapels, annual rents, dial silver, death pennies, yearly fruits, alms duties, profits, and emoluments whatsoever, which pertained, or in time coming may pertain, to whatever chapelry, altarage, vivarage, or prebend ; founded in whatever church, chapel, or college, within the towns of Leith and Lestalrig.

In the year 1745, the patron of this living was lord Balmerino, who being taken in the rebellion with other Scotch noblemen, was beheaded on Tower Hill, London, and the patronage forfeited to the king.

ALBERT MEMORIAL CHAPEL.

ROMAN CATHOLIC CHAPEL.

THIS elegant little Chapel is situated south east of York place, near the north-eastern extremity of the New Town ; it was erected in the year 1813, from a plan by Mr. Gillespie. The original design by that celebrated architect was more elaborate in its ornamental parts, but the funds were not adequate to carry it wholly into effect, though it was so much admired as to have occasioned a very general adoption in Scotland of the English, or pointed style of building.

The view represented in the plate is taken from the west, and shows the principal front of the chapel ; it measures within 100 feet in length and 52 in breadth, and is adorned by an original painting by Vandyke, the figures as large as life, representing the Infant Saviour in the lap of the Virgin : here is likewise an excellent organ.

In consequence of a proposition to repeal the penal laws against catholics about forty years ago, violent commotions were excited, particularly in Edinburgh, where the reformation has left deep traces of attachment to the protestant religion, and of aversion to popery. Petitions from the town-council, praying to be heard by counsel against the bill, were transmitted to parliament, having been signed by the lord provost in name of the community. The populace, however, were too impatient to wait the result of this application ; copies of the following letter were dropped in several places of the city :

“ Men and Brethren,

“ Whoever shall find this letter will take it as a warning to meet at Leith Wynd, on Wednesday next, in

the evening, to pull down that pillar of popery lately erected there."

" A Protestant.

" Edinburgh, Jan. 29th, 1779.

" P. S. Please to read this carefully, keep it clean, and drop it somewhere else.

" For King and Country.—Unity."

The magistrates immediately took measures with a view to prevent the effects of this letter, and put a paragraph in the newspapers, ascribing it to some popish incendiary. On Tuesday evening, February the 9th, however, a numerous mob assembled at the foot of the Trunk Close, where stood a building not long before erected, in which a popish bishop resided, and which was supposed to be a chapel; and though the magistrates with the city guard, and the duke of Buccleugh with a party of his regiment of fencibles, repaired to the place, and endeavoured without bloodshed to prevent any mischief, the house was set on fire and entirely consumed. On the following day the rioters proceeded to the mass-house in Blackfriars Wynd, which they likewise set on fire, and destroyed the furniture, books, &c. They forced open also the shops of some Roman Catholics; but the military arriving prevented further mischief, by committing some of the rioters to the Castle, and tranquillity was afterwards completely restored, the people having been assured that the obnoxious bill would be withdrawn.

THE CASTLE OF THE BISHOP OF LONDON

ROSLIN CASTLE.

At a short distance from Roslin Chapel are the remains of Roslin Castle, beautifully situated upon an almost insulated rock, on the north bank of the river Esk. It is said to have been first erected about the year 1100, when Wm. De Sancto Clero, who came to England with William the Conqueror, obtained from Malcolm Canmore, a great part of the lands and barony of Roslin. The Castle is now principally demolished, and large fragments of its walls lie scattered about in indiscriminate ruin; it appears to have been of considerable extent, and its walls were of immense thickness. Part of the Castle, as appears by a date inscribed upon it, was rebuilt in 1563, and is now in the occupancy of a gentleman; in the grounds are cultivated strawberries, which are famous for their beauty and flavour. The access to this ruined fortress is on the eastern side, by a narrow bridge over a deep natural ravine, the sides of which are solid rock; the gate of entrance was originally very formidable; on its right side are remains of arches, buttresses, and broken walls. Sir William Sinclair, who founded the beautiful chapel of Roslin, kept a splendid court within the Castle about the year 1440, and the town of Roslin then became very populous by reason of the great concourse of all ranks and degrees of visitors that resorted here; he was served at his own table in vessels of gold and silver; lord Dirleton was master of the household, lord Borthwick his cupbearer, and lord Fleming his carver, in whose absence deputies of similar rank were appointed to execute their several offices; his halls and other apartments were richly adorned with sumptuous hangings, and every other appearance was of the

most princely and magnificent kind. The state assumed by the lady of this nobleman, has been noticed in the description of Black Friars Wynd. In the year 1455, sir James Hamilton was imprisoned in Roslin Castle by order of James II. on account of his having espoused the cause of James, earl of Douglass, who had raised considerable forces against the authority of the king. Sir James, however, was not long detained in custody ; for the king, in consideration of his professions of allegiance, and the loyalty of his father, lord Hamilton, not only pardoned him, but, according to some historians, promised to give him his eldest daughter in marriage.

In 1544, this Castle, with that of Craigmillar and the town of Leith, as well as the city of Edinburgh, with every other habitable place within the compass of seven miles, was destroyed by the army sent by Henry VIII. so that the present buildings must have been erected since that period.

In December, 1681, the Castle and Chapel were plundered by an enraged mob, chiefly tenants and inhabitants of the barony ; this outrage took place in resentment of the treatment which this lord had experienced from the republican party, he being an active loyalist, and so firm was his attachment to the royal cause, that he thereby greatly encumbered his estate. In the year 1650, this fortress was surrendered to general Monk.

Interior of the Cathedral of
St. Paul, London

ROSWELL CHAPEL.

and entrance

ROSLIN CHAPEL.

THIS ancient and beautiful fabric is situated upon a peninsulated rock which overhangs the river Esk, and is in the immediate vicinity of the village of the same name, distant about seven miles south of Edinburgh. The surrounding country having rather an unpleasant aspect, a most agreeable surprise is felt on being introduced to the fine specimens which this place affords of the magnificence of nature and the ruins of art. The scenery is singularly picturesque and romantic, comprising all the sylvan beauties of impending woods, beetling rocks, hills, dales, precipices, and mountains; here may be realized, the glowing and highly wrought representations of the most fascinating romance, reviving the enthusiasm which few have not felt in early life. The chapel stands east and west, and is sixty-nine feet in length and thirty-four in breadth; both the interior and exterior are adorned with sculpture of the most delicate workmanship, affording one of the most beautiful specimens of architecture any where to be seen; it has been pronounced unique, being conformable to none of the styles of building which have at any time prevailed in this or in other countries. Mr. Gandy, who has favoured the public with several fine views of this chapel, which were engraved for Britton's Architectural Antiquities, describes it as a combination of the Egyptian, Grecian, Roman, and Saracenic styles. The exterior of the building is ornamented with a number of beautiful pinnacles, richly wrought with flowers; the abutments under them contain many curious and grotesque devices. The interior consists of a body with north, south, and eastern aisles: beyond the latter is a chapel or chantry, in which

are standing four altars. The roof is supported by two rows of clustered pillars, about eight feet high, which divide the aisles from the body of the chapel. The capitals of the pillars and the friezes are enriched with foliage, and an infinite number of emblematical figures, chiefly representing the most interesting narratives of Scripture, such as Sampson pulling down the house on the Philistines, Abraham about to sacrifice his son, the various works of charity described in Holy Writ, together with some representations of circumstances founded on the peculiar tenets of the Catholic religion. The star that appeared to the wise men terminates one of the four elegant pendants which adorn the roof of the eastern chapel, and around it are displayed representations of several passages relative to the birth of Christ. At the south-east angle of the chapel is a wreathed column called the "Prentice's Pillar," deriving its name from this tradition:—The master mason having received a model of a column from abroad, which was of an unusual character, resolved upon inspecting the original before he proceeded upon his work; during his absence his apprentice finished the pillar, which gave great satisfaction. The master, upon his return, hearing so many praises bestowed upon the lad, in a fit of jealousy killed him with a hammer. Two heads in this part of the chapel are said to represent the master and his apprentice; one appears like an old man, with a frowning savage aspect; the other having a scar or indenture on his forehead. The spot is pointed out where ten barons of Roslin were deposited in the family burial place, which was a spacious vault under the pavement, so dry, that in 1693 the bodies were found entire, some of them having lain nearly a century.—“They were of old,” says Hay, “buried in their armour, without any coffin; the late baron being the first that was buried in a coffin, against the sentiments of the duke of York, who was then in Scotland, and of several other persons well versed in antiquity; but his widow would not hearken to

such a proposal, thinking it beggarly to be buried after that manner." Other individuals connected with the family were buried in this place. At the west end there is a monument with a Latin inscription, now scarcely legible, to the memory of George, earl of Caithness, who died in 1582. A flight of steps leading from the east end of the south aisle conducts to a small subterranean chapel; at the east end stood an altar, which was demolished at the reformation. Near its site is an opening which conducted to the confessional; a basin for the holy water is placed in the south wall.

Roslin Chapel was built by the earl of Orkney and Caithness, in the year 1446, according to the opinion of those who have written on the subject; but rather in 1306, if we may attach this meaning to a date which was lately discovered by some persons who were employed in repairing the roof. The church here was founded for a provost, six prebendaries, and two choristers or singing boys; it was endowed with ample revenues, and consecrated to St. Matthew, the apostle. The earl, notwithstanding much expense, did not complete the chapel. In 1523, various lands in the neighbourhood were granted for dwelling houses, gardens, and other purposes, to the provost and prebendaries, by sir William St. Clair, who in his charter makes mention of four altars dedicated respectively to St. Matthew, St. Andrew, St. Peter, and the Virgin Mary. At the time of the reformation this church was spoiled of its revenues; and the whole property, of which they had been virtually deprived for many years, was finally resigned by its possessors in 1572. The chapel was defaced on the night of the 11th of December 1688, by a mob. In the last century it was repaired by general St. Clair, and since by his successors.

At present the interior is in good preservation, and care is taken that no wanton dilapidations shall take place. In consequence of the delicate mosses which vegetate upon the walls, the tinting is rich and various, and the effect produced upon

the different parts of the building by sunshine is beautiful beyond description.

The celebrated Walter Scott, in his *Lay of the Last Minstrel*, has noticed, in connection with this place, a superstition which prevailed among the common people in ancient times. It was believed, that previously to the decease of any one of the St. Clair family, Roslin Chapel was seen for a time all in flames.

O'er Roslin all that dreary night,
A wondrous blaze was seen to gleam ;
'Twas broader than the watch fire light,
And redder than the bright moon-beam.

It glared on Roslin's castled rock,
It ruddied all the copse-wood glen ;
'Twas seen from Dryden's groves of oak,
And seen from cavern'd Hawthornden.

Seem'd all on fire that chapel proud,
Where Roslin's chiefs uncoffin'd lie ;
Each baron, for a sable shroud,
Sheathed in his iron panoply.

Seem'd all on fire within, around,
Deep sacristy and altars pale ;
Shone every pillar foliage bound,
And glimmer'd all the dead men's mail.

Blaz'd battlement and pinnet high,
Blaz'd every rose-carv'd buttress fair—
So still they blaze, when fate is nigh,
The lordly line of high St. Clair.

THE MUSEUM OF THE UNIVERSITY OF OXFORD

DESIGNED BY J. N. B. AND J. N. B.

ROYAL EXCHANGE.

THIS large and elegant building is in the High Street, and nearly opposite St. Giles's church. Its form is a square, having a court 96 feet south and north by 86 feet east and west. Three sides are wholly occupied with shops, warehouses, &c. The south sides consist of a colonnade having a platform, above which there are pilasters and vases. Under this colonnade there were at one time several arches, which are now built up, with the exception of the principal one, which forms the entry to the court. On the north side of the square is the Exchange, properly so called, which is 111 feet long by 57 broad. Owing to the great declivity of the ground, the back part of the building is 40 feet higher than the front. In that part facing the square there is a piazza, surmounted by a platform. On this platform rest the bases of four Corinthian pillars, supporting a pediment, on which are sculptured in stone the arms of the city. The top is ornamented with vases. The ground-floor is laid out in shops. A hanging stair, from which a very fine view of the New Town is to be had, leads to the upper stories. In these there are upwards of twenty apartments, employed partly by the board of customs; some of the rooms have been lately fitted up as offices and chambers for the town council. The office of the trustees for the improvement of fisheries and manufactures in Scotland, fills the south west angle of the Exchange. The fund in their hands is part of the equivalent money given to Scotland at the Union, and is employed in premiums to those who have distinguished themselves by improvements in the arts.

The population and trade of Edinburgh having in the

beginning of the last century increased to a great extent, much inconvenience was experienced from the want of houses for private families, as well as of buildings for public meetings, and for the accommodation of those who were employed in transacting the business of the town and nation. It was proposed therefore to enlarge the City, and render it more commodious; for which purpose strenuous exertions were made on the part of the royal boroughs, likewise by individuals of patriotism and wealth. An act of parliament was obtained to sanction and give energy to their plans. One of the first fruits of this spirit was the erection of the Royal Exchange, which was thought most pressingly necessary, and which was designed for the use of the merchants. The commissioners appointed by Parliament authorized the town council to contract with tradesmen, and the present situation, then covered with decayed houses, was selected as the most eligible spot for such a building.

The foundation-stone was laid on the 13th September, 1753, George Drummond, esq. then grand master of the freemasons, presiding on the occasion. To give an imposing effect to the ceremony, a triumphal arch was constructed, and pavilions erected for the magistrates and the officers of the grand lodge, besides galleries for the other lodges and the spectators. The building, however, owing to the contract not having been settled sooner, was not commenced till the 13th of June, 1754. It was finished in 1761, costing upwards of £30,000, which would be above £80,000 in the present day.

An attempt was lately made to induce the merchants to do business in the Court of the Exchange, but without success, confirmed habit leading them to prefer meeting in the street.

ROYAL INTERIOR

ROYAL INFIRMARY.

BETWEEN Drummond and Infirmary-streets, and parallel to them, stands the Royal Infirmary, at once a plain and stately edifice. It consists of a body and two wings. The body, which lies in a line east and west, having its principal front to the north, is 210 feet long ; the wings project 70 feet. The height is three stories, exclusive of the ground-floor, attic story, and garrets. Every part of the building is quite simple, excepting the front, which is elaborately ornamented, having a rusticated basement, supporting four three-quarter columns, and two pilasters of the Ionic order, finished with a proper entablature and attic over it. In a niche over the principal door there is a statue of George II. dressed in the Roman costume, and a little above this a clock. An octagonal spire crowned with a dome rises from the centre of the building. A large gate, at the sides of which there are vases, opens into a spacious court in front of the house, to which there are other entrances on the right and left. The interior is well laid out : besides two small staircases at both ends of the house, a very wide one, capable of admitting sedan chairs, conducts to the higher apartments. On the ground-floor are the kitchen, hall, and other offices. The managers' room, the consulting-room for physicians and surgeons, and a waiting room for students, besides the several wards, which are in number fifteen, occupy the middle part of the house. In the fourth story is the operation-room, in form of a theatre, lighted from above, and fitted to hold about one hundred spectators.

The many accidents and diseases that occur, particularly in a populous town, render an infirmary one of the most

necessary and useful of charitable institutions ; by it immediate relief is afforded to those who would otherwise perish, and the best surgical assistance furnished to persons who from poverty or other causes could not elsewhere procure it. Many useful lives are thus preserved to society, and much comfort imparted to individuals and to families.

Impressed with these considerations, several benevolent individuals in 1721, published a pamphlet, stating the urgent necessity of erecting an hospital, and containing proposals for raising a fund for this purpose ; but the difficulties in the way of such an object appeared so formidable, and the success so problematical, that the scheme was dropped.

In the year 1725 the matter was resumed, and something definite done towards its completion. The copartnership of the Scottish fishery being this year about to be dissolved, application was made by the college of physicians for a part of the stock to be appropriated to the founding of an hospital. After obtaining this, they set on foot a subscription, which was cordially supported by the public. A meeting of subscribers was called in February 1728, when those gentlemen who had the merit of originating and carrying forward the measure, gave a statement of their proceedings, and of the situation of affairs. A committee consisting of twelve was then appointed for the purpose of promoting the subscriptions, and preparing a plan of the projected institution. Agreeably to a resolution at this meeting, a petition was addressed to the general assembly, praying that they would be pleased to request of the different ministers under their jurisdiction to exert themselves in procuring contributions for an undertaking which would be of such essential benefit not only to the capital, but likewise to the whole country. The assembly entered very warmly into the measure, and recommended it to the support of all under their authority, by passing, in May 1728, an act in its favour, of which copies were circulated among the ministers ; but such was the apathy or indolence of the clergy in this matter, that only eighty-three of them made collections.

Some time thereafter, another meeting was summoned ; and as it was then ascertained, that the funds were in such a state as to warrant the commencement of the undertaking, a house was accordingly provided ; patients were admitted into it on the 6th of August, 1729. The funds having accumulated to £5000, it was deemed time to begin operations on a larger scale, and accordingly, in the month of August 1738, the foundation of the present edifice was laid ; people of all descriptions and professions came cheerfully forward with their gratuitous aid to the work, some contributing money, some materials, and others personal labour. Even persons at a great distance assisted in furthering the undertaking ; the proprietors of the plate glass-houses at Newcastle upon Tyne, supplied a quantity of glass sufficient to glaze the windows of the house, and money was remitted from England and Ireland, and even from different places on the continent, and America.

Since this time, the Institution has been frequently benefitted by the liberality of individuals. The earl of Hopetown bestowed upon it an annuity of £400 during a period of twenty-five years, when its funds were in a very depressed state. An estate in Jamaica, yielding annually upwards of £200, was bequeathed to it in the year 1750 by Dr. Archibald Ker, of that island. In 1750, the lords of the treasury granted to the corporation a sum of £8000, which enabled the managers to fit up sixty beds for sick soldiers, and in the same year a ward was allotted for servants, from another benefaction, which still continues. George Drummond, esq. so often provost of Edinburgh, and to whom it has been so much indebted for ornaments and improvements, ranks very high among the benefactors of this charity. In memory of its obligations, a bust of him has been placed in the hall. It was done by Nollekins, and bears the highly complimentary inscription, " George Drummond, to whom his country is indebted for all the benefits which it derives from the Royal Infirmary."

LADY YESTER'S CHURCH.

THIS Church takes its name from Lady Margaret Ker Yester, daughter of the first earl of Lothian, who was born about the year 1572, and died on the 15th March, 1647, as appears from her monumental inscription. The town-council having given up a design which they had formed of building a church on the Castle-hill, about the middle of the 17th century, Lady Yester, concerned at the great want of places for public worship, granted to the magistrates a sum amounting to £555 : 11 : 1½ to be employed in building a church, and a moiety of that sum in addition for the support of its ministers, the whole to be devoted to the former purpose, should it be found necessary. Accordingly a church was begun, which was finished in the year 1655. As both sums were expended on the church alone, this liberal lady allowed out of her jointure £55 : 11 : 1 yearly, till it should accumulate to a competency for the clergyman. When the church was completed, the town-council marked out a district for its parish. It is only a few years since this building was taken down, and the present one erected exactly on the same site.

Lady Yester's Church is directly opposite the Infirmary. It stands in a line north and south, having one of its ends fronting the street. The front is the only part of the building which is constructed of hewn stone, and has nothing to distinguish it except three gothic windows; the church is light and spacious within, and will contain about 1500 persons. Eastward and adjacent to it, there is a small cemetery for the burial of those who die in the infirmary. There is but one minister over this Church, which, with the exception of the New Grey-Friars, and St. George's, is the only instance of a single charge in Edinburgh.

LANDY THE STREETS CHURCH.

ST. ANDREW'S CHURCH.

ST. ANDREW'S CHURCH.

ST. ANDREW'S CHURCH stands on the north side of George's Street, to which, notwithstanding its unfortunate projection beyond the regular line of buildings, it is a considerable ornament.

The body of the church is more remarkable for simplicity than elegance; and, indeed, but for the beauty of the spire, which tapers to a majestic height above it, would be reckoned an indifferent object. It is of an oval form, measuring 87 feet by 64 in the interior; the height of the spire being 186 feet. Fronting the street is a portico, supported by four pillars of the Corinthian order, which are well executed; and, in some degree, give the body of the church a picturesque effect. St. Andrew's possesses a chime of bells, eight in number, a peculiarity which distinguishes it from any other church in North Britain. No good reason can be assigned for the exclusion of bells from Scottish churches; but as the melody produced by them is not of the highest order, it is hoped the people will not be thought destitute of *musical taste*. The lover of mirth may amuse himself by supposing that these solitary chimes were conferred on this church in compliment to its titular Saint (a great favourite, indeed, in Scotland), though we cannot deduce from any historical or traditional source a proof of his affection for this branch of the fine arts. The native of the south may reckon it unfair that the neighbouring edifice, dedicated to the patron of England, should have no distinction of this kind; but St. George would probably have thought it no compliment, as he plumed himself entirely on his fame as a warrior. That these

two reverend personages, however, should, in a manner, be consecrated afresh, by being made the tutelar saints of Presbyterian kirks, is a circumstance not a little curious.

It may be observed, that the projecting situation of the church, as opposed to the building opposite, which seems to retire from view, occasioned a witty remark by the ingenious Henry Erskine, " that the forwardness of the clergy and the modesty of the physicians, had ruined the appearance of the finest street in Europe."

George's Street is the middlemost of three main streets that run in parallel lines through the whole extent of the New Town; it is about half a mile in length, and thirty-eight yards in breadth, and is bounded by Charlotte Square on the west and by St. Andrew's Square on the east.

ST ANTHONY'S CHAPEL.

ST. ANTHONY'S CHAPEL.

THIS picturesque ruin is situated on the eastern side of the king's park, on the acclivity leading to Arthur's Seat, and about a quarter of a mile from the palace of Holyrood. The vicinity of this hallowed pile, was formerly the haunt of contemplation in its various moods, and even now is frequently visited with a superstitious awe. A celebrated living author has drawn one of his most interesting scenes from this place, and excited the imagination by a recital of its various horrors ; here, in the year 1720, a miscreant, Nicol Muchet, murdered his wife, and a carne or heap of stones was raised by the passing traveller, stone after stone, in token of detestation of the barbarous act ; in some parts of Scotland this practice of rearing carnes is still continued on similar occasions.

St. Anthony's Chapel is in length 43 feet, and in breadth and height about 18 ; it had a tower at the west end, great part of which is now broken down, but in its original state it is supposed to have been 40 feet in height. The chapel had two doors and two windows on either side, with a stone roof of three compartments, part of which may be seen by referring to the subjoined engraving. In the southern wall, which is now entirely demolished, was a small arched niche, containing a receptacle for holy water ; and on the opposite side a niche of larger dimensions, strongly secured for keeping the pix with the consecrated bread. The chapel appears to have been enclosed by a stone wall extending to some distance upon the hill. The hermitage to which this chapel was appended, has a cell still remaining, which is frequently visited by the curious ; its dimensions are 16 feet by 12. " The hermitage," observes

ST. ANTHONY'S CHAPEL.

an author, who appears to have allowed its inmates all the sanctity they professed, “ though situated in the vicinity of a populous city, yet bore the appearance and possessed the properties of a wilderness ; secluded from the hurry and bustle of the world, the hermits enjoyed every favourable opportunity of cultivating devotion. The sterility of the rock was well fitted to inculcate a lesson of humility. The site being lofty, and commanding a most extensive prospect, could not fail to assist their pious meditations, and if at any time they cast their eyes on the royal palace below, what a striking contrast might not imagination form between the court, so frequently assaulted by an unprincipled rabble, and their own tranquil situation, in which they were gladly preparing for the regions of everlasting repose.” The monastery of Knights Templar, dedicated to St. Anthony, to which both the hermitage and chapel belonged, was situated near the present church of South Leith. The monastic seal is still to be seen in the advocates’ library at Edinburgh ; it displays a St. Anthony in an old gown or hermit’s mantle, with a sow towards his right foot, and on the circumference this inscription :—*Sigillum commune capituli sancti Anthonii prope Leith.*

The accompanying view shews the south east aspect of the chapel of St. Anthony ; it is now in a very dilapidated state, and so rapidly have its remains diminished during the last half century, that it has been conjectured no traces of it will be found after the lapse of fifty years more. On the right side of the print appears the town of Leith, and on the left Nelson’s Monument ; the new prison and the lofty spire of St. Andrew’s Church in the New Town.

34. BERNARDO WOOD

View of Tivoli

ST. BERNARD'S WELL.

ON the margin of the Water of Leith, at the distance of about a mile from Edinburgh, stands St. Bernard's Well. Edinburgh and its vicinity, are remarkable for romantic views and extraordinary legends, it is therefore not surprising, that a number of idle traditions are in circulation relative to this Well. The waters are considered to possess several medicinal qualities, and are much resorted to by invalids. The late Lord Gardenstone, who appears to have properly appreciated the virtues of this spring, purchased the property, and erected over the Well a beautiful temple, of the Doric order, composed of a circle of columns surmounted by a dome, and enclosing a statue of Hygeia, the goddess of health. The figure is of a colossal size, and rather indifferently executed; the face, however, is expressive of sympathy and kindness. The Well is kept by a person, who generally receives a gratuity for a morning draught of the sulphureous water of the saint: a flight of steps lead to the Well, which is enclosed by the basement of the temple; the entrance is by a door, seen in the print.

The late Walter Ross erected a tower nearly opposite to St. Bernard's Well, which, as it is composed chiefly of stones from ruinous buildings, and ancient sculptured ornaments, attracts the traveller's attention. Here may be seen the four heads which decorated the ancient Cross of Edinburgh, and over which Walter Scott makes doleful lamentation. Here is also the baptismal font that belonged to the chapel of St. Ninian's, a religious house that stood formerly near the spot where the Register Office now rears its majestic front. Nor are they civil and religious relics alone that Ross has worked into this odd

ST. BERNARD'S WELL.

structure ; for in the same inclosure with the tower, stands the unfinished effigy of Oliver Cromwell, which the magistrates of Edinburgh purposed to erect in the Parliament Square ; it is very generally known that the equestrian statue of Charles II. decorates, at present, the above Square.

Another well, equally famous with that of St. Bernard, is situated about three miles south-west of Edinburgh, called the *Rowing Well* ; it is a draw-well, about 35 feet deep, and has obtained its name from certain noises which proceed from it previously to a storm. These sounds sometimes resemble the beating of a coppersmith's largest hammers, at other times, a shower of hail falling into the water ; and a violent bubbling, often raises the water more than a foot above its natural level.

This well is one of those phenomena which can be explained in hydraulics, by the principle of intermitting and reciprocating springs.

ST. NICHOLAS CHURCH.

ST. CUTHBERT'S CHURCH.

WE have to revert to the days of superstition for the names of most of our churches and religious houses. The piety and active benevolence of good men of yore, impelled them to traverse sea and land, to diffuse the blessings of salvation among the heathen : yet whether St. Cuthbert himself was actually the founder of the church, which still bears his name, or whether some holy brothers of his order established themselves on the site of it, is probably a matter of little consequence. Mention is made of a church here as early as the year 1052, when donations were made to it by Macbeth, the usurper. St. Cuthbert's, or the West Kirk, stands at the western extremity of the valley, which separates the New, from the Old Town of Edinburgh. The Church of St. Cuthbert, situate immediately at the base of the rock on which the castle is built, has a very fine appearance entering Edinburgh from the west, by Princes Street. Though the architecture of this building is not superb and rich, its modest appearance accords sufficiently with the object to which it is devoted ; and the objection that has been made, that the exterior of the church by no means corresponds with the wealth of St. Cuthbert's parish, shews very little of tasteful criticism. St. Cuthbert's Church was rebuilt about the middle of the last century, at the expense of £4231 sterling ; this, however, is only a partial statement of its cost, as its elegant and lofty spire was not then erected.

The parish anciently contained not only the parishes of Corstorphin and Liberton, but the city of Edinburgh and the town of Canongate : its extent is still very great ; the king is

ST. CUTHBERT'S CHURCH.

patron ; and the ministers are two in number ; they were formerly paid by the heritors, or landed gentlemen, chiefly in corn, which made their stipends very uncertain.

The antiquities, and things remarkable in this parish, are numerous ; among them we may notice, that a little to the southward of St. Cuthbert's lies the burgh of Barony, called Portsburgh, so denominated from its vicinity to the west-port. On the outside of this port, in former times, were the “ king's stables,” and the “ chapel of the Virgin ;” and adjoining the chapel was a plat of ground, on which tilts and tournaments were performed, with feats of arms and martial exercises. From the walls of the castle the king and his court looked down on the exploits of the brave.

About a quarter of a mile to the north of St. Cuthbert's, is the village of the Water of Leith. On this water stand the mills of Edinburgh and Dene ; and so ancient is their erection, that it may be traced to the time of David I. who granted the profits arising therefrom, to the abbot and canons of his new foundation of Holyrood House.

This view of St. Cuthbert's Church is taken from the south west : some of the monuments that appear in the churchyard are of singular construction ; part of Princes Street is seen in the distance.

THE CHURCH OF ST. MARY, LONDON.
The church of St. Mary, London, is a fine specimen of the architecture of the 14th century. It is a simple, rectangular building with a steep gable roof. The steeple is tall and narrow, with a small square section near the top containing a window, and a cross on the very top. The main body of the church has several windows, some with multiple panes. In the foreground, there is a low wall or fence. To the left of the wall, a person is standing next to a donkey. To the right, another person is pushing a wheelbarrow. The ground in the foreground appears to be a dirt or cobblestone path. The sky is light and cloudy.

CHAPEL OF EASE TO ST. CUTHBERT'S.

THIS building stands on the west side of Cross Causeway, nearly a mile from the mother church of St. Cuthbert. Its principal front or entrance is on the north-east, on which side there is a small projecting tower, surmounted with a belfry and a low spire ; the windows are of a very common character, and give no indications of a place devoted to public worship. A porch, having a pediment ornamented with brackets, projects from the building into the street, and forms part of the wall which encloses the chapel on this side.

The number of inhabitants in the parish of St. Cuthbert having so much increased about the year 1757, it became necessary to erect a place of worship for their accommodation ; and accordingly, before the buildings in this quarter became extensive, a subscription was raised for a chapel of ease, to be dependant upon the landholders and Kirk session of the parish of St. Cuthbert, and in them was to be vested the government of matters respecting the chapel, and the right of electing the minister. The whole cost of the building did not much exceed eleven hundred pounds. In order to induce the people to subscribe with liberality, it was declared by the landholders and kirk-session, that every one who gave five pounds, should have a right to vote in electing the first minister. The stipend of the minister is paid out of the seat rents ; therefore, as the demand for seats, as well as the collections at the church door for the benefit of the poor, will be greater or less, according to his popularity, it has hitherto been thought most advantageous to give the election of the minister to the seat holders.

CHAPEL OF EASE TO ST. CUTHBERT'S.

Some time after the erection of this chapel its neighbourhood was converted into a cemetery, and so strong was the predilection for sacred ground, even among the presbyterians in this case, that previously to its being used as a place of interment, a bishop of the Scottish episcopal communion was prevailed upon with all due solemnity to consecrate the ground; this office it seems being either inconsistent with the principles of a presbyterian clergyman, or that he is not deemed sufficiently sanctified for the function.

About five years after the completion of the chapel, a poor house was erected for the convenience of this extensive parish; this was also done by voluntary contributions: the expenses of the house are defrayed partly by the collections at the church doors, by voluntary donations made to the house, and by an assessment on the real property within the parish. According to Arnot, (who has not informed his readers wherein the different management consisted), the poor in this house were maintained at a smaller charge than those in the Edinburgh and Canongate charity workhouses, which expended £4 : 11 : 6 on each person annually, while the poor of St. Cuthbert's were supported for £4 : 1 : 6 each.

St. Peter's Church, York.

SOUTH LEITH CHURCH.

THE general assembly, having in 1650 ordered the church of Restalrig, which also belonged to Leith, to be pulled down, it being esteemed a monument of idolatry, the inhabitants of Leith were destitute of a parish church for about fifty years ; and during that period, they resorted for worship to a large and beautiful chapel dedicated to St. Mary, now distinguished by the name of South Leith Church, and which was, in the year 1609, declared by authority of parliament, to be the parish church of the district. Two clergymen were appointed to officiate in it ; the senior is nominated by the crown, and the junior by the kirk session and incorporation.

This church contains many ancient and curious monuments ; it is very capacious and commodiously fitted up ; the different crafts have here distinct places assigned to them, which are designated by their several armorial bearings ; the galleries are calculated to hold a great number of persons, but they are much too low, and are a great obstruction to the light. Maitland, speaking of this church, observes, “ Though I cannot ascertain the time of a chapel’s being first built at Leith, yet it must have been before the year 1495, for then there seems to have been considerable church-work carried on at Leith. Now whether this was the foundation of the chapel, or a rebuilding, or enlargement, I cannot ascertain, though I take the last to be the most probable ; and that the work carried on at that time, must either have been the erection of the choir at the eastern end, (which was demolished by the English army in 1543), or the side buildings or aisles, which plainly appear to be additional. Wherefore I am of opinion,

SOUTH LEITH CHURCH.

that the central or middle aisle of the present church, with the steeple, were the ancient chapel, which I think is plainly to be seen by the side buildings, which I take to have been added when the said chapel was made parochial, for the better accommodation of the numerous auditory ; and that the choir at the eastern end was then demolished, as being of little or no use since the abolition of popery. Be that as it will, this large church, which is handsome and well contrived in the inside, was the same on the outside till the year 1746, by its being decorated with five beautiful windows on each side the roof, which being found hurtful to the said roof, were taken down in the years 1747-48, whereby the church is deprived of its greatest external ornament."

The present east end exhibits strong indications that a choir was formerly attached to it, as mentioned by Maitland ; and that there was likewise a continuation of the aisles is equally apparent.

SOUTH BRIDGE.

SOUTH BRIDGE.

THE South Bridge runs in a line with the North Bridge, and both of them intersect the High Street at right angles. The former extends from the Tron church, to the university ; it is composed of nineteen arches of various sizes, but all of them concealed, except that over the Cowgate.

From the regularity of the buildings which have been raised on this artificial foundation, the largeness and splendour of the shops, and the constant thoroughfare of its pavements, this street may be said to be, at once, the most compact, busy, and elegant, in the Old Town. The houses are distinguished from this peculiarity in their structure, that they are all of one height, and quite regular on the top, with the exception of every third house, which has a pediment, relieving, by this means, the dull uniformity that would otherwise prevail. On one side, Adam's and Hunter's Squares, and College Street, diverge from the South Bridge ; while, on the other, there is Infirmary Street, which opens to a fine view of the Infirmary on the right hand, and the High School in front.

Inconvenience had been felt from the want of an easy access from the New Town to the streets and squares, which were pretty numerous on the south side of the Old Town, and also from the difficulty of getting coals and other goods conveyed from the country in that direction to the interior parts of the city. It was with the design of remedying these inconveniences that the South Bridge was constructed. It was thrown over the Cowgate in 1789. The foundation was laid on the 1st of August, 1785, and in about three or four years afterwards it was completed, the shops and houses occupied, and the streets

SOUTH BRIDGE.

passable : the building ground sold for £50 per foot, and £109,000 per acre, a price altogether unparalleled in the history of such transactions. The purchasers hoped to redeem this enormous expense by the advantages in the sale of goods, which were justly considered as attaching to such a central situation, and crowded resort.

The view represented in the plate is taken from the Cowgate, and shews the only arch that is visible of the South Bridge. To a superficial observer, the existence of this Bridge would hardly be apparent, as, in passing over it, the eye is principally attracted by the elegance of its houses, and the variety of merchandize displayed in the shops. The opening is defended by a substantial iron railing, and presents a view of the Cowgate at a distance below. This street being above the level of the North Loch, the arches across it are much smaller than those of the North Bridge, the dimensions of which were omitted in our description of that structure, for the purpose of comparing them with those of the South Bridge.

The width of the three greater arches of the North Bridge 72 feet each, breadth or thickness of the piers $13\frac{1}{2}$ each, width of the small arches 20 each. The total length of piers and arches is 310 feet, and the entire length of the Bridge, from the High Street to Princes Street, is 1125 feet ; its breadth within the wall over the arches is 40, and at each end 50 feet ; the height of the greater arches, from the top of the parapet to the base, is 68 feet.

The visible arch of the South Bridge is 36 feet in height, and about 30 in width.

ST. GILES'S CHURCH.
South Side

THE CHURCH OF ST. GEORGE

ST. GILES'S CHURCH.

THIS religious establishment is considered of very high antiquity, some having dated its origin even so far back as the year 850; but it certainly existed in 1359, as express mention is made of it at that period. It was merely a parish church, of which the bishop of Lindisfarn or Holy Island, in Northumberland, was patron; to him the abbot and canons of Dunfermline succeeded in the patronage; and to them the lord provost and magistrates of Edinburgh: such was the estimation in which this church was held, that about forty altars dedicated to different saints were founded in it. In 1466 it was erected into a collegiate church by James III. The chapter consisted of a provost, curate, sixteen prebendaries, a minister of the choir, four choristers, a sacristan, and beadle; to each of them distinct salaries were appointed.

At the Reformation, this Church was for the greater commodiousness divided by partition walls; the four principal apartments being allotted for divine worship, the lesser ones to other purposes. The sacred utensils of the church were at the same time made prize of by the magistrates of Edinburgh; they consisted of a great variety of articles of gold and silver, which were sold, and the money applied in the first place to the necessary repairs of the church, after which the surplus became part of the funds of the corporation; several reliques were also dislodged, such as the arm of St. Giles, his coat, and a small piece of red cloth which hung at his feet.

The central part of the building was fitted up for the accommodation of the citizens, under the name of the Old

ST. GILES'S CHURCH.

Church, as the presbyterians at the Reformation conceived an unconquerable aversion at calling their churches after the names of saints; for this reason likewise, the south-west quarter was styled the Tolbooth Church, from its proximity to the prison. The north-west part was not erected into a church till the year 1699, when it being found that a scarcity of churches still existed at Edinburgh, and this place remaining useless, it was fitted up under the title of Haddow's Hold Church. It received this name in compliance with a tradition, purporting that part of it had been used as a prison, wherein one Haddow, a person of distinction, had for a long time been kept in durance.

The choir of St. Giles's, now called the New Church, is esteemed the most beautiful place of worship in Edinburgh, and is the chief church in the city: for herein is the king's seat, and those of the magistrates, and lords of session; in the southern aisle the general assembly hold their annual convention, and there is a stately throne for the king's commissioner.

The interior of the church presents a very beautiful specimen of what is now denominated English architecture; its length from east to west on the outside of the wall is 206 feet, its breadth at the west end is 110 feet, in the middle 129 feet, but at the east end only 76. It is adorned with a lofty square tower, the top of which is encircled with open figured stone-work, resembling the ornaments that enrich the circlet of an imperial crown. From each side, and each corner of the tower rises a rib of stone-work, which intersecting above, completes the figure of an imperial crown, the top of which is terminated by a pointed spire. The church stands on a very elevated site; the height of the spire is 161 feet.

The appearance of this interesting fabric has recently been much improved, by removing the houses which had been built from time to time against its walls; it is likewise about to undergo a complete repair, and from the scientific skill of

ST. GILES'S CHURCH.

the architect to be employed, its venerable features are not likely to suffer any deterioration.

The Church of St. Giles's is memorable on account of several important transactions connected with its history. In 1440, chancellor Creighton and sir Thomas Livingstone, (regent for James II.) held a conference here relative to the custody of the king's person ; the right to such a momentous charge having been disputed between them.

In 1556, the people being strongly excited by the preaching of the celebrated reformer John Knox, entered the church armed with sticks and stones, and demolished the images, in token of their abhorrence of popery ; on the feast of St. Giles, which happened soon afterwards, they stole the image of the saint, and threw it into the north loch ; the place where those convicted of adultery were plunged as a punishment for their sins. There was a great confusion among the priests, when upon their going to decorate the image for the procession, annually made upon that festival, they discovered it had been stolen ; the murmurs ran from the friars to the bishops, and from them to the queen. To supply its place, a small image was borrowed from the grey friars, which the people in derision called young St. Giles ; and as a tumult was dreaded, the queen regent graced the ceremony with her presence to overawe the rabble : it was conducted peaceably till towards the end, when the queen retiring to dinner, the mob destroyed the image and scattered the procession. " Then (according to Knox), was Dagon left without head or hands ; down goes the cross, off go the surplusses, round caps, and cornets with the crowns, grey friars gaped, the black friars blew, the priests panted and fled, and happy was he that got first to the house ; for such a sudden fray came never among the generation of antichrist within this realm before."

In 1596, dissensions being at a great height between the king and the reformers, one of them preached a sermon in St. Giles's Church ; he chose for his theme the sufferings of the

Ephesian church, her constancy and courage under tribulation, and the glorious reward to be given to him that overcometh. He railed furiously against the king, exclaiming that he was possessed of a devil; that one devil being put out, seven worse had entered into his place; and that the subjects might lawfully rise and take the sword from the hand of him who made such misrule.

On the accession of James to the throne of England, he went to St. Giles's, there, as it were, to bid solemn farewell to his people; the congregation assembled on so singular an occasion was extremely numerous. The minister preached an exhortatory discourse, which the king took in good part; and when it was concluded, his majesty observing the people to be exceedingly affected, addressed them in the warmest language of friendship, requesting them not to be dejected at his leaving them, since, as his power to serve them was increased, his inclinations, he assured them, were not diminished.

So much having been said of the church, it may not be improper to give a brief history of the saint to whom it was originally dedicated. St. Giles, abbot and confessor, was born in Greece in the sixth century, and descended from illustrious parentage; both his parents being dead he gave all his wealth to the poor, and left his native country. He travelled into France, and entering into a wilderness on the banks of the Rhone, he continued there for three years, living entirely upon the spontaneous production of the earth and the milk of a deer. He was esteemed a person of great sanctity, and, like many other popish saints, was much famed for the working of miracles. In the reign of James II. of Scotland, a gentleman of high esteem in Scotland, assisted by the king of France, obtained possession of a supposed arm bone of this holy man, which he bequeathed to the church of St. Giles; here it remained enshrined in silver till the revolution, when, as before observed, it was displaced, and the shrine converted to other purposes.

Engraved by J. G. Thompson. Published by J. G. Thompson, 10, Strand, London.

ST GEORGE'S CHAPEL
(York Place)

ST. GEORGE'S CHAPEL.

THIS elegant structure, which is dedicated to St. George, stands on the south side of York Place, in the New Town. It was erected by voluntary subscriptions in the year 1794, from a design by the late celebrated Robert Adam, esq. at the expense of £2200. It is built in no regular order of architecture, and is of rather small dimensions, containing only six hundred and fifty sittings ; yet it is neatly and tastefully fitted up. The interior form is a regular octagon, the pulpit and the reading desk occupying the two southern angles, having the altar immediately behind them ; the opposite gallery contains the organ. The exterior of the building presents a handsome front, which forms a sort of screen for the body of the chapel, and is adorned with pinnacles of a very uncommon construction. The present minister is the rev. Richard Shannon.

Since the drawings were made for this work, a most beautiful chapel has been erected in Nicholson Street, Old Town, called the Antiburghers' Meeting-house. It was founded in 1819, upon the site of the old place of worship belonging to the same body, and is a considerable ornament to this quarter of the city. Its principal front is in Nicholson Street, the style of its architecture being what is usually named Gothic. The centre is composed of two large abutments, and is crowned with niches and pinnacles ; the wings are likewise ornamented in a similar manner. Of late years, great splendour and taste have been manifested in the erection and fitting up the places of worship in Edinburgh, and this remark may be applied to those of every sect and denomination. Formerly, the accommodation of the several congregations, in the homeliest manner, was all

that was aimed at in the erection of places of public worship ; but, at present, the different parties seem to vie with each other, in the splendour and convenience of their religious establishments.

We have great pleasure in acknowledging the very liberal assistance which has been rendered in our descriptive department by Mr. R. Kinneburgh, the intelligent and respected superintendant of the Deaf and Dumb Institution at Edinburgh.

ST. NICHOLAS CHURCH.

Constantinople.

ST. GEORGE'S CHURCH, CHARLOTTE SQUARE.

THIS Church stands in the centre of the west side of Charlotte Square, in the new Town, and forms the western termination of that extensive line, called George Street. Its front is 112 feet in extent, having a portico supported by four columns about 35 feet in height. The dome rises from a basement 48 feet square, and is terminated by a cross, 160 feet above the level of the street. The foundation-stone was laid on the 14th of May, 1811, with great ceremony, in presence of the lord provost, the magistrates, and the town-council, accompanied by several ministers of the city; a glass case was deposited at the same time, containing some coins, a plan of the building, with other papers; likewise a copper-plate, on which was engraved as follows :

The foundation stone of this Church
was laid
in the 51st year of the reign of
His Majesty King George III.
By William Calder, Lord Provost
of the City of Edinburgh.
Robert Reid, Esq. Architect.

The Church may be considered by a superficial observer as a very elegant erection, and highly ornamental to the square in which it stands; but when scrutinized and examined upon architectural principles, it presents a pile of

discordancy very rarely to be met with, and is an object of almost general disapprobation. A gentleman who had been absent from Edinburgh a considerable time, but who was, notwithstanding, well acquainted with the design of Adams for the building of the Church and Square, has favoured us with the following observations. "Having been all my life an amateur in the noble science of architecture, I was naturally pleased to think on my expected return to Edinburgh, that I should soon witness the erection of the new church; which I well remembered, Mr. Adams himself, and his numerous friends and admirers, always considered to be one of his chef d'ouvres: you can scarcely figure to yourself my mortification, on seeing that it is not Robert Adams's church, with his noble projecting portico, corinthian columns, and fine cupola, which would have formed one of the grandest objects possible, whether viewed from the square, or approached by George Street; but something manufactured and put together somehow from the shreds and patches of his design, in as cheap and as thrifty a way, as seceder heart could wish." This abandonment of the original design was under pretence of economy, though the sum saved bears no comparison with the object which might have been attained by its expenditure.

The design by Adams, was after the model of St. Paul's Cathedral Church, in London; and it is only necessary to bring the two elevations together, which has been very judiciously done in the Scots Magazine for March, 1814, to see what might have been effected by a more liberal system.

The church was opened for public worship on the 5th of June, 1814. The auditory is composed of people of the highest rank; the seats are supposed to accommodate about 1600 people; and the minister is of the presbyterian persuasion.

ST. JAMES'S CHAPEL,
North.

Engraved by A. Smith & Co. from a drawing by J. Smith. Street View. No. 1, 1841.

ST. JAMES'S CHAPEL, LEITH.

THE Chapel of St. James, South Leith, stands on the east side of Constitution Street ; it is built in the Grecian style of architecture, and has very little of the appearance of a place of worship. The entrance is under a square recess, which is upheld by Corinthian columns. The design was made by the late Mr. James Thompson, architect. The internal form is a complete square, having an opening in the ceiling, lighted by a cupola. The seats are neatly fitted up, and calculated to contain about five hundred persons. The pulpit is stationed on the east side of the chapel, having the communion table exactly in front of it ; in a gallery opposite stands the organ. There is likewise a gallery on the north and south sides. The chapel was erected in 1805, and the expenses were defrayed by the congregation and other private subscriptions ; it was first opened on Sunday the 30th of March, 1806, when a suitable sermon was preached to a very crowded audience, by the then pastor, Dr. Lloyd. The rev. Dr. Russell is now the minister.

Arnot, after describing the church of South Leith, and its chapel of ease, observes, “ besides these there is an episcopal congregation at Leith. After the late rebellion, when the persecution was set on foot against those of the episcopal communion in Scotland, who did not take all the oaths and formulas prescribed by law, the episcopal meeting-house at Leith was shut up by the sheriff of the county ; persons of this persuasion being thus deprived of their form of worship, brought from the neighbouring country Mr. John Paul, an English clergyman, who opened this chapel on the 23rd of June, 1749. It is called St. James's Chapel. Till of late the congregation only rented

it, but within these few years they purchased it for £200. The clergyman has a salary of about £60 a year, and the organist ten guineas. These are paid out of the seat rents, collections, and a voluntary contribution among the hearers. It is, perhaps, needless to add, that there are one or more meeting-houses for sectaries in this place ; for in Scotland there are few towns, whether of importance or insignificant, whether populous or otherwise, where there are not congregations of sectaries."

ST. JOHN'S CHURCH

ST. JOHN'S CHAPEL.

THIS beautiful chapel stands opposite to the western termination of Princes Street, near St. Cuthbert's or the west kirk. The style of its architecture is that generally denominated the florid gothic, and was built from a design by William Burn, esq. architect; the expense of its erection was upwards of £15,000; it was began in the year 1816, and completed in 1818.

The form of this Chapel is oblong, with a projection to the west, in which is the principal entrance surmounted by a most elegant square tower, 120 feet in height. The length of the building is 113 feet and its width sixty-two. Around the structure is a terrace, under which, on the south side, is a range of vaults, to be used as burying places, and on the east end is a cemetery, enclosed by a high screen, having handsome towers on its angles, and every way corresponding with the style of architecture displayed throughout the chapel: this screen was erected after the present drawing had been taken.

The sides or aisles of this chapel are divided into compartments by buttresses, between each of which, with the exception of the two at the east end, are inserted windows; above these the wall terminates with a battlement of open work. The body of the chapel, above the roof of the aisles, is adorned with buttresses and pinnacles. The principal entrance, on the west, is through a beautiful arched door, having a window above, similar to those in the sides of the building. The great east window is thirty feet in height, and is fitted up with stained glass by Eggington, of Birmingham. The roof is

ST. JOHN'S CHAPEL.

supported by two rows of columns, and there being no gallery, the interior has altogether a light and airy appearance.

“The extraordinary zeal, which has of late years been displayed at Edinburgh, in the erection of public buildings, and in particular, the revival of the style of architecture now under consideration, recalls the memory of ancient times, when all those venerable cathedrals and abbeys, which are such splendid monuments of the taste and wealth of our forefathers, were standing complete in all their magnificence, untouched by the hand of violence or of time, and frequented by generations, which with all their pomp and splendour have passed away; those who are now acting their parts on the busy stage of time must soon follow, and generations yet unborn, shall view with feelings of approbation, the splendid edifices that are rearing in present times.”

ST. PAUL'S CATHEDRAL

ST. PAUL'S CHAPEL.

ST. PAUL'S CHAPEL, of which we have given a south-west view, stands on the north side of York Place, in the New Town. Its style of architecture is what is usually called Gothic, and is taken from that which prevailed in the time of Henry VI. The building consists of a centre or body, and two side aisles; the former is ornamented on each angle with a handsome octangular tower, and between each window, as well as the windows of the aisles, is an elegant buttress surmounted with a pinnacle. The length of the chapel on the outside is about 123 feet, and its breadth 73. Its interior dimensions, including the aisles, are 105 feet 9 inches by 63 feet. The body is 46 feet in height. On the north-east corner of the building is the vestry room; the other three angles are occupied by staircases for the galleries, which are over the aisles: those on the south side have entrances from the street; the galleries, with the vestry room, reduce the length of the aisles to 79 feet; their width is $15\frac{1}{2}$ feet, height 29 feet. The pulpit is placed at the east end, and immediately before the communion table, the organ occupies the gallery at the west end directly above the grand entrance to the chapel; the vaulting of the centre and side aisles is composed of an obtuse arch with a richly moulded groining: the ceilings under the galleries are ornamented with rib work. The pulpit, the fronts of the galleries, and linings around the communion table are of oak, and adorned in a suitable manner: the great eastern window is fitted up with painted glass by Egginton, of Birmingham, representing the cross amidst rays of glory.

ST. PAUL'S CHAPEL.

This Chapel was erected from a design by Archibald Elliot, esq. and is highly creditable to his genius and taste. It was begun in February 1816, and finished in June 1818 : the expenses, which were raised by voluntary subscription among the congregation, amounted to £12,000. The rev. Archibald Alison, author of *Essays on Taste*, and of two volumes of sermons, and the rev. Robert Morehead, are the ministers.

This congregation formerly assembled in a chapel which was founded in April 1771 ; it stands in the Cowgate, and is now occupied by a congregation of dissenters.

[illegible]

U.S. DEPARTMENT OF AGRICULTURE

SURGEON'S SQUARE.

THIS Square stands on a retired spot of ground on the south side of the High Street, at a short distance from the Royal Infirmary. It contains not only the surgeon's hall, (which is seen on the left side of the print), but a commodious building for the use of the Medical Society, and several genteel residences. The area of the Square is enclosed by an iron fence, and is ornamented with a handsome shrubbery. The surgeons being the first company of crafts in Edinburgh, were in early times (according to the custom of other European nations), incorporated with the barbers, but by an act of council in 1657, the surgeons and apothecaries were at their mutual desire united into one community, which was ratified by parliament. From the time that the arts of pharmacy and surgery were united, the corporation laid aside entirely their business as barbers. This occasioned an act of council of the 26th of July, 1682, recommending to this corporation to supply the town with a sufficient number of persons qualified to shave and cut hair, and who should continue dependant upon the surgeons. But in the year 1722, the surgeons and barbers were separated in all respects, except that the barbers are still obliged to enter their apprentices in the register kept by the surgeons. By a charter of George III. dated March 14th, 1778, this corporation was re-erected under the name of "The Royal College of Surgeons of the City of Edinburgh." The charter establishes a scheme of provision for the widows and children of the members. By this scheme each member is obliged to pay £5 per annum to the college during his life ; if he dies before making four yearly payments, neither his widow nor children receive any benefit from the fund, but

SURGEON'S SQUARE.

if he survives that period and leaves a widow, she is entitled to £25 per annum during her widowhood; if he dies a widower leaving children, they are entitled in the whole to £100.

The buildings belonging to the medical society in this square are seen on the right side in the view annexed; they consist of three rooms, each measuring 30 feet by 20, exclusive of smaller apartments. The weekly meetings of the members are held in one of the large rooms; in another are contained their natural curiosities, anatomical preparations, and a valuable collection of medical books; and the third is destined for the purpose of making chemical experiments.

The medical society appears to be of as great antiquity as the medical school in the university. The celebrated Dr. Fothergill and some of the most distinguished physicians in Great Britain, were among its original members; but no records of its transactions are to be found earlier than the year 1737. Such is the importance of this society, that by universal consent, it is allowed to have contributed greatly to the prosperity and reputation of the university, and from the subscriptions of gentlemen and others desirous of giving encouragement to so laudable an institution, its advantages are expected to be more generally diffused.

EDINBURGH CASTLE,
from the west

THE CITY OF EDINBURGH
 Edinburgh, 1840.

THE TOWER OF THE
CASTLE OF ST. MARY'S

THE CASTLE.

THE Castle, built on the western extremity of that lofty ridge on which the greater part of the Old Town stands, is an imposing and interesting object of curiosity to travellers, and of numberless historic recollections to the inhabitants of the capital, which its proud towers defend. This ancient fortification covers a space of solid rock, upwards of six acres in extent, and rears its lofty walls from a basement that is 300 feet above the level of the sea. The Castle is accessible only on the eastern front ; the rock on which it stands is, on all other sides, very steep, and in some places perpendicular. Proceeding from the High-street, we enter upon a space of ground called the parade, which divides the Castle from the town, and is 350 feet in length and 300 in breadth. A barrier of pallisadoes is the most exterior enclosure of the fortress, beyond which is a fosse, very broad and deep, having a draw-bridge and gate flanked on each side by a battery of three or four guns. The rock then rises in front, mounted with thirteen brass twelve pounders in the form of a crescent. At its base is the guard room for the sentinels of the standing guard. The entrance to the Castle then winds along the right side of the rock, passing at short intervals through two gateways, one of which has two port-cullises. It then makes a turn to the left, stretching along the west side of the hill. At the angle which it thus forms, there is a battery mounted with brass twelve and eighteen pounders, pointed to the north-west ; adjoining are the main guard-house on the left, and on the right store houses for gun-carriages and other implements of artillery. The declivity of the hill further on is occupied by the grand store room and arsenal, powder magazine, houses for the governor, fort-

THE CASTLE.

major, and store-master, and the new barracks. Proceeding from this to the higher part of the Castle, we advance northward through a gate, which leads into an area partly occupied by the chapel, and in which are placed some other guns. From this we pass into a court of a square form, enclosed by the buildings of the old barracks.

This fortress is under the superintendence of a governor, deputy governor, fort-major, store-keeper, &c. The governor's salary is about £1000 a year, and the deputy governor's £500. The former is generally a nobleman, who never resides in the Castle, his house is consequently occupied by the deputy. About 2000 men may be accommodated in the Castle, though usually not above half of that number is retained here. The different magazines are capable of containing 30,000 stand of arms. Those in the arsenal are in the finest order; the smaller arms are arranged to represent a variety of curious devices, such as portcullises, butterflies, &c. The powder magazine is the only building in connection with the Castle, which is bomb-proof. The new barracks were erected in the year 1796, and are capable of lodging 1000 men: though they are not destitute of elegance, they greatly impair the romantic appearance of the Castle viewed from the west. The old barracks are principally occupied by the officers.

The south side of the square, now used for barracks, was formerly the Parliament House. It may here be mentioned likewise, that the royal gardens were on the north side of the Castle, in what was afterwards called the North Loch, and the king's stables on the south side; the houses that now occupy this site still retain the names of King's Stables and Castle Barns.

The east side of the square was in former times inhabited by royalty, and from the dates 1556 and 1616, on the walls, would appear to have been repaired at these different periods. This part of the Castle is distinguished by associations with some of the most interesting events of our

THE CASTLE.

national history, as well as by its antiquity. An insulated apartment in the south-east angle of the square is remarkable for the birth-place of James VI. ; an event to which some rude lines on the wall allude :—

Lord Jesu Chryst that cronnit was with thornse,
Preserve the birth quhais Badzie heir is borne,
And send her sonne successive to reign still,
Lang in this realme, if, that it be thy will.
Als grant, O Lord, quhat ever of her proceed,
Be to thy glorie, honer, and praise—so bied.

19th IVNII, 1566.

A small aperture is pointed out as being the mouth of a passage, which communicated between the Castle and the Grassmarket, and through which by means of a string to which a bell was attached, the queen of Scots (when imprisoned here), was to have informed her Roman Catholic friends of the birth of her child, that they might carry it off to be instructed in her own religion. This quarter of the Castle is appropriated to the confinement of state prisoners. Here is likewise the crown-room, in which the regalia of Scotland were formerly deposited on the 26th of March, 1707. It had been for a long time imagined that these had been privately conveyed to London, and the supposition was strengthened by the circumstance, that the keeper of the jewel office in the Tower of London shewed a crown which he called the crown of Scotland, and that when the crown-room was opened by lord Adam Gordon, in presence of some noblemen, nothing was discovered but a leaden chest containing a few old charters ; but on the 4th of February, 1818, by appointment of the Prince Regent, a commission consisting of some of the principal gentlemen of this city examined the room. They assembled for this purpose at the governor's house in the Castle, and were received by the guard under

THE CASTLE.

arms, and by the military band. The royal commission and other official documents having been read, the king's carpenter and smith proceeded to break away the fastenings of the two doors, of which the outer is of oak, and the inner of iron grating, having first been satisfied that they had not been opened since the previous search. A large oblong chest, secured by two strong locks of which no key could be found, was then discovered thickly coated with dust, and when forced open was found to contain the crown, sceptre, and sword of state, corresponding completely with the description of them given in the instrument of deposition. The regalia, after being exhibited from the window by the lord provost, were replaced in the chest, which was again secured. It is expected that these relics of royalty will be displayed for the public gratification, and it is likewise hoped that the exhibition will be gratuitous. The crown is nine inches in diameter, twenty-seven round, and six and a half in height. It is of pure gold, is enriched with precious stones of various descriptions, and rests on a square cushion of crimson velvet. The length of the sceptre is thirty-four inches, and its stem, which is two feet long, is of a hexagonal form and double gilt. The handle and pommel of the sword are of silver gilt, and fifteen inches long; the traverse is of the same materials, and measures seventeen inches and a half; the whole length of the sword being five feet. About the same time there was found the silver rod of office, of which the precise use is not known.

The situation of the Castle is both healthful and pleasant, but though naturally strong, it may be doubted whether it would enable a garrison to hold out a protracted seige. If it could not in ancient times maintain the character of impregnable, which at first sight one would be disposed to ascribe to it, there is still less reason to think that it could sustain an attack now that the invention of gunpowder has afforded such facilities to offensive warfare, especially when we consider that the fortifications are not in the modern and most improved style,

THE CASTLE.

that the buildings are not bomb-proof, and that the besieged would soon be destitute of water, the concussions of the rock from the continued operation of artillery having occasioned a spring to subside which supplied the Castle with that necessary article. On the other hand the fortress has its advantages, for there appears to be no place from which cannon could be made to bear well upon it, except the Castle-hill, which might be occupied by the garrison.

The history of the Castle is so much interwoven with that of the city, that it is unnecessary, in this place, to do any more than give a rapid sketch of the principal events connected with it. As a naturally favourable port for defence to the undisciplined belligerents of ancient times, its existence is older than records. About fourteen hundred years ago, the country of Lothian was subdued by the English Saxons, and a bulwark raised on the site of the present fortress for the purpose of securing their conquests, and placing an effectual barrier to the incursions of their enemies. It was afterwards successively occupied by the Saxons and Picts for many years, till it became the property of Malcolm II. It was given to the English in 1174 as the price of the liberty of William the Lion, who was made prisoner by the English, but was restored to him on his marrying the king of England's daughter. The English possessed themselves of it under Edward I. but were compelled by Thomas Randolph, nephew of Robert Bruce, to resign it in the year 1313. In this reign it was demolished by the command of Bruce, lest it might be afterwards of advantage to the enemy. Baliol ceded it to Edward. Sir William Ramsay soon after retook it. It fell again into the hands of the English, who, notwithstanding repeated attempts upon it by the Scots, kept possession till they were obliged by the stratagem of sir William Douglas, to evacuate it, (see History, p. 15). In the reign of James II. the chancellor, Chrichton, shut himself up in the Castle, and defended it successfully against the king. Subsequently it became occasionally the prison as well as the palace of the kings.

THE CASTLE.

In the year 1573, Kirkaldy of Grange gallantly resisted for three-and-thirty days, the united efforts of Scots and English to take the Castle, which at length he was under the necessity of yielding up, the garrison having mutinied. The earl of Morton afterwards becoming master of it, held it in opposition to his sovereign, James VI. but a reconciliation taking place, he delivered it up. In 1650 it sustained a siege of above two months against Cromwell, when it honourably surrendered. The duke of Gordon held it a long time for James at the Revolution. In the rebellion of 1715, it was attempted by the rebels, who were foiled. The Highlanders in 1745 laid siege to it, but from the want of heavy artillery, were obliged to desist, leaving the royalists in undisturbed possession.

The form of the old town of Edinburgh has been aptly compared with that of a fish. The castle and the rock on which it stands being the head, the range of buildings continuing to the end of the Canongate the spine, and the palace of Holyrood the tail, the numerous lanes and wynds on either side forming the ribs. The plate shewing the castle from the west, gives a complete idea of the head, the body retiring in perspective. The view from the Grassmarket exhibits the south east parts of the Castle, the edifice beneath in the market is the public granary, of very recent erection ; it has conveniences for weighing grain, and for lodging it when required.

Near the innermost gate of the Castle used to lie the famous Mons Meg, now removed to the Tower ; it derived its name from Mons, in Flanders, where it was cast. This piece of ordnance is composed of a number of thick iron bars, bound by strong hoops of the same metal. Its length is thirteen feet, its diameter two feet three inches and a half, the bore being twenty inches wide and tapering inwards, the breach is comparatively small. At the siege of Roxburgh it burst, and was never afterwards repaired. In the wall of a house on the Castle-hill a large ball may be seen, which was projected by one of the guns in the time of the rebellion.

THE TOWER OF LONDON

THE TOLBOOTH.

OF the TOLBOOTH of Edinburgh, noted till within these few years for being one of the largest and most sombre buildings in the kingdom, not a wreck is left behind. The materials were sold in September 1817, and its demolition took place immediately afterwards. When the remembrance of its once grim aspect has faded from the memory, a few engravings like the present will be all that remains to gratify the curiosity of posterity. The matchless descriptions of a great anonymous writer have, indeed, procured to it a more lasting celebrity, than the mere durability of its materials could have attracted ; and where is the subject, however disagreeable, that eminent genius deigns to illustrate, which is not replete with unspeakable interest.

The Tolbooth of Edinburgh was built by the citizens in 1561, and designed for the use of the parliament and courts of justice, and the confinement of debtors and criminals. From the year 1640 until 1817 it had been devoted to the latter purposes. Whatever might have been the treatment of prisoners in this jail formerly, for many years back considerable attention was paid to its unhappy tenants, yet with little effect, since the circumstances of the place would not admit of it. The inconveniencies they laboured under, were want of proper ventilation, and other evils inseparable from a building in many respects imperfect. Hence, the situation of the prisoners thronged together, without respect to the various degrees of delinquency or state of health, was dreadful beyond description. Such irregularities are, indeed, too common in most of these wretched abodes ; but they have seldom been united to a more horrible

extent than in the Tolbooth of Edinburgh. The state of those confined simply for debt, was scarcely, in point of misery, exceeded by that of those imprisoned for grievous offences. The difficulty of incarcerating a debtor by the law of Scotland, has been often inveighed against as a gross obstruction to the course of justice, and subversive of the rights of the subject, in consequence of a delay in forms, sufficient to enable the party to fly from his creditor ; but, suppose flight impossible, the wretched debtor may be dragged from his home at any hour, shut up for months in a cell too loathsome for the immurement of the most odious criminal ; his goods, nay the very means of subsistence for his family (if he has one), seized, and all this for a debt of a few pounds. His only relief in this case is to take out a *cessio bonorum*, on a delivery of his whole effects to his creditor ; and even here, “ *the Law’s delay*” is finely exemplified. Unlike the King’s Bench and other prisons in England, there were no areas in this prison, affording the captive fresh air, exercise, or change of scene ; here the boundary of his view was a small window, the scanty light of which was abridged by massy bars of iron : there was surely in this procedure great inhumanity.

The principal officer of the Tolbooth, had the title of Captain of the Jail, and he merited much praise for his exertions in alleviating the condition of the prisoners. The history of Captain Portens, once the principal officer, and afterwards a prisoner here, is too celebrated to require particular notice. The west side of the prison was, of late years, used as the place of execution ; a range of shops may be seen in the print, on the roofs of which these melancholy spectacles were exhibited. Of the New Jail, on the Calton Hill, an account shall be given in its place ; it is enough to say here, that it has been constructed with the greatest regard to cleanliness and general accommodation.

THE PRISON, BIRMINGHAM.

THE TOLBOOTH, LEITH.

THIS abode of guilt and wretchedness is situated at the bottom of a narrow lane called Tolbooth-Wynd ; it was erected in the year 1655. The entrance is by a flight of steps, at the foot of which is an archway, affording a passage under the prison to the butchers' market ; above is a square recess containing the royal arms, in a very dilapidated state ; on the right hand side of the passage is a gloomy bow window closely grated ; on its upper part are two figures of animals rudely executed.

The Tolbooth at Leith is remarkable for nothing but its antiquity, and for being one of those places of confinement, so disgraceful to the boasted liberality of the present day : the attention paid to its inmates may be as kind as circumstances will admit ; but it possesses none of the conveniences calculated to make human existence even tolerable ; and for the sake of humanity and the character of our country, we earnestly hope that this, and every other jail of its kind in Scotland as well as in England, will soon be superseded by more commodious and wholesome prisons ; and that the accumulated horrors of cold, darkness, stench, and solitude, will no longer be heaped upon our unfortunate or guilty fellow creatures. The notes made by Mr. Gurney, who, in company with Mrs. Fry, visited many of the jails in Scotland and in the north of England, and which have recently been published, exhibit grievances which call most imperiously for redress. The lines that follow are too aptly descriptive of such prisons.

— A dismal mansion that appears
Black with the smoke of many hundred years,
Steel-barr'd ; its loop-holes narrow, dark, and dun,
Admit the tempest, but exclude the sun :

THE TOLBOOTH, LEITH.

Slow and suspicious is its iron gate,
That closes on the wretched, fix'd as fate.
There, never enters the fresh breeze of spring,
With health and living spirits on its wing ;
The twilight's gloom at day's meridian height,
Hangs dimly there and blends it with the night.
The gath'ring filth of centuries is there,
No brush disturbs the spider in his lair,
That unmolested fattens on his race,
For every sunlight insect flies the place ;
E'en the foul bat would scorn it as a home,
And seek the shelter of a holier dome.
It tortures every sense ; compared to this
The vile hyena's den were cleanliness—
A pest house, where the taint of every clime
Strikes a deep root, and festers into crime.

Mr. Gurney observes, “ It is very evident that a degree of misery quite unfair and quite unnecessary, is endured by prisoners of all descriptions in many, perhaps the majority of the prisons in Scotland.” And again, “ There is much more cruelty than justice in loading our prisoners with chains, when prisoners are fastened to the iron bar, as at Haddington ; or to the bedstead, as at Forfar ; or to the wall of their cells, as at Berwick ; or to a ring in the floor, as at Newcastle : the suffering produced by chaining becomes extremely aggravated ; the injustice of the practice is very evident from this consideration, that if the prisoner be untried, we have no right to subject him to any inconvenience beyond bare imprisonment ; and if he be tried, chaining, according to the laws of this kingdom, seldom, if ever, forms a part of his sentence.

THE FACTORY BUILDING.

THE UNIVERSITY.

It was not till the year 1582, that Edinburgh could boast an university, though teachers of philosophy had been before this period established in the city. In the year 1768, a memorial was drawn up, proposing the rebuilding of the University, on a new plan, but on the site of the old buildings. The American war breaking out, prevented the prosecution of this plan ; but after the peace, the design was again brought before the public in the year 1785, in a letter to the right honourable Henry Dundas,—“ On the proposed improvements of the city of Edinburgh, and on the means of accomplishing them.” Nor was it long after this, when the magistrates set on foot a subscription for erecting a new college, agreeably to a plan of Robert Adam. In a few years considerable sums had been collected, so that part of the old buildings were pulled down, and the foundation stone of the University was laid on the 16th of November, 1789, by lord Napier, as grand master-mason of Scotland.

The ceremony on this occasion was remarkably grand : and the magistrates of the city as patrons of the University, in their robes ; the professors, in their gowns ; the students with sprigs of laurel in their hats ; the free-masons of all the lodges in the city and neighbourhood, arranged in the order of their seniority, formed a procession peculiarly impressive.

So soon as the different masonic ceremonies were performed, two crystal vases, cast purposely, were deposited in a vacuum formed in the stone. In one of these vases were placed different coins of the reign of George III. each coin being previously enveloped in crystal, so ingeniously that the superscriptions could be distinctly read without breaking the

THE UNIVERSITY.

envelope. In the other vase rolls of vellum were deposited ; on these rolls were written a short account of the original foundation, and the present state of the university. There were besides deposited the public newspapers of the day ; a list of the names of the principal, and professors of the university ; the lord provost, and magistrates ; and the officers of the grand lodge of Scotland. The vases, being hermetically sealed, were covered with a plate of copper wrapped in block-tin. Upon the inner side of the copper were etched the arms of the city of Edinburgh ; those of the University ; and those also of the right honourable lord Napier, as grand-master mason of Scotland.

It was proposed in the original plan to surmount the east front, in which is also the principal entrance, with a dome : nothing can be more imposing than the grandeur of this front ; for the simple style of the architecture gives it a high tone of the sublime, and the four enormous columns of the Doric order, hewn out of one solid stone each, that adorn the main entrance, and support a handsome portico, rival any thing that ancient architecture can boast.

Over the gate is the following inscription :

“ ACADEMIA JACOBI VI. SCOTORUM REGIS, ANNO POST CHRISTUM NATUM M,D,LXXXII. INSTITUTA. ANNOQUE M,DCC,LXXXIX. RENOVARI COEPTA, REGNANTE GEORGIO III. PRINCIPE MUNIFICENTISSIMO ; URBIS EDINENSIS, PREFECTO THOMO ELDER ACADEMIÆ PRIMARIS GULIELMO ROBERTSON. ARCHITECTO ROBERTO ADAM.”

The east and west fronts extend 255 feet in length ; the south and north 358 ; and when the building is completed, the principal, and six or seven of the professors will have houses within its precincts. The library and museum are each 160 feet in length ; and the hall for public exercises is 90 by 30 feet.

THÉÂTRE ROYAL.

THE THEATRE.

It is generally known that theatrical entertainments, which are now denounced, were at one time much encouraged by the clergy. The subjects were scriptural, the clergy the composers, the church was the stage, and the sabbath the day of performance. In the early and dark ages, religious spectacles were exhibited, representing in dumb show, sometimes intermingled with speech, the most interesting scenes in the history of Christ, such as the incarnation, passion, and resurrection ; in process of time, the lives and miracles of the saints were displayed, till the popish clergy, endeavouring to impose their absurdities and pretended miracles beyond the credulity of the people, lost the patronage they had enjoyed, and their trash was superseded by more rational entertainments ; these at length became so fraught with buffoonery and indecency, that persons of sober habits could give them no countenance, and soon after the Reformation, the clergy of Scotland endeavoured to abolish them altogether, threatening with excommunication all who should attend them. Theatrical performances were however revived at Edinburgh about the year 1680 ; for when the duke of York kept his court in this city, he was attended by a company called the duke's servants, who wore a livery, and were considered part of his household. " No salary or certain emolument being annexed to their service, the royal patronage was found insufficient for the support of rival companies, and they were united by letters patent in 1684 ;" but upon the duke's return to England, the stage was entirely neglected at Edinburgh, and it was not till after the ferment excited by the Union, and the confusion occasioned by the

rebellion in 1715 had subsided, that any stage adventurer thought of Scotland.

After this time, Edinburgh was visited every two or three years by itinerant companies, who occasionally rented the Tailor's Hall in the Cowgate. The clergy set themselves against these performances as illegal; but after much litigation, a licence was obtained for the establishment of a theatre at Edinburgh, and the house seen in the annexed view was erected. It stands at the north end of the North Bridge, nearly opposite to the Register Office. The building presents a mean and barn-like appearance, and it very naturally excites the surprise of strangers, that while so many superb edifices are rising in different parts of the city, such a theatre should be allowed to exist. The principal front has a portico, which gives some appearance of consequence to the building: upon the point of the roof in front is a statue of Shakspeare, and on the sides appear the tragic and comic muse; but though the outside possesses so few attractions, the inner part of the house is not wanting in accommodations. It was first opened for exhibitions in December, 1769, the prices of admission were then 3s. for the boxes and pit, 2s. for the first gallery, and 1s. for the upper or second gallery; the box seats are now 5s. each, though no alteration has taken place in the price of seats in other parts of the theatre.

In the subjoined view are seen some of the houses newly erected upon the North Bridge, which have given so much occasion for complaint to the citizens of Edinburgh.

TRADES REFRESHMENT HOSPITAL.

TRADES' MAIDEN HOSPITAL.

THE incorporations of Edinburgh, excited by the good example of the Company of Merchants, who had instituted a charity for the daughters of such of their members as might fall into decayed circumstances, became desirous of establishing a similar institution. A contribution was accordingly made among the different companies of artificers ; and the common council of Edinburgh, having by their act of the 3d of May, 1704, approved of their charitable intention with a promise to give it every encouragement, the corporation purchased certain houses and gardens on the western side of the Horse Wynd, where the Hospital is now situated, and having appointed a governess, school mistress, and servants for the same, and taken in several girls, they applied to parliament for an act to establish their new foundation, and to enable them to make by-laws for its government, which act was readily obtained. The hospital being now established by parliament, Mrs. Mary Erskine, the joint foundress of the Merchant Maiden Hospital, gave so considerable a sum to this institution, that the incorporation of trades unanimously agreed to give her the title of joint foundress of their hospital, and that two persons of the name of Erskine, nominated by her should be joint governors in all times coming and after her demise ; the said governors to have the presentation of the several girls that she had a right to present by virtue of her great and charitable benefaction, and that the senior of the said representatives or governors should preside in all courts of the governors, and to have the custody of one of the three keys of the hospitals charter-house.

TRADES' MAIDEN HOSPITAL.

The Trades' Maiden Hospital is a large plain building, three stories in height, having nothing particular in its appearance to attract attention. Each girl on entrance pays the sum of £1 : 13 : 4, and on her departure receives £5 : 11. In the year 1742, the number of girls maintained here was fifty, and it appears that no addition has been made to the number since that time. The revenue is estimated at about £650 yearly.

ST. JOHN'S CHURCH, LONDON.

THE TRON CHURCH.

THIS Church is a great ornament to the High Street, in which it occupies a very distinguished situation, being upon the intersection of the great street which leads to the North and South Bridges. The foundation appears to have been laid about the year 1637 ; but owing to the great expense incurred in the progress of this, and another church then erecting upon the Castle Hill, it was judged most prudent to abandon the latter, and employ the materials intended for it upon the Tron Church, the completion of which was more desirable, on account of its central situation ; and that nothing might be wanting to carry on the work with expedition, the common council, in 1644, ordered one thousand stone weight of copper to be purchased in Amsterdam, for covering the roof ; but afterwards changing their plan, the copper was again sold, and an order given to cover the church partly with lead and slates, and the treasurer to the works was directed to proceed with all expedition.

But notwithstanding this, little advance was made during the space of three years ; for at the latter end of 1647, nothing more than the timber of the roof was erected, and covered in from the weather with deals ; this delay seems to have been occasioned by the want of money ; for the council, at this time, ordered a voluntary collection to be made among the inhabitants, towards completing the roof ; and the pews being at the same time fitted up, to the number of one hundred and eight, the profits arising therefrom, were devoted to the same purpose. But with all the endeavours of the council, the building of this church appears to have been a very tedious

THE TRON CHURCH.

work ; for though the foundation was laid in 1637, the roof was not finished till twenty-six years afterwards ; it was, however, preached in long before its completion, the first rents for the seats being collected for the year 1647.

In 1673, a bell was hung in the steeple, which cost the sum of 1490 merks, eight shillings, scots ; and five years afterwards, the clock which belonged to the Trone, or Weigh House, was likewise put up. On the front of the Church, over the door, is this inscription :

ÆDEM HANC CHRISTO ET
ECCEŒ SACRARUNT
CIVIS EDINBURGENI
ANNO MDCXLI.

Thus, it is plainly shewn, that this edifice is properly denominated Christ's Church, and not that of the Tron ; which latter appellation it received on account of its vicinity to the Trone, or public beam, for the weighing of merchandize, which then stood hard by.

Opposite to the Church, in the middle of the High Street, is interred the body of one Merlin, a French pavior, according to his own desire ; probably in commemoration of his being the person who first paved the High Street ; his grave was formerly known by a row of six stones laid in the pavement, in the form of a coffin, and six feet in length ; but the pavement of the street requiring frequent repairs, this memorial has been wholly erased.

TRINITY COLLEGE CHURCH.

HARTFORD, CONNECTICUT.

TRINITY COLLEGE CHURCH.

TRINITY CHURCH, and the College to which it was appended, were founded by Mary of Guileurs, consort to king James II., about the year 1462. The charter of foundation, is published at length by Maitland, in his History of Edinburgh; it is introduced by an address from James, the then bishop of St. Andrew's, to all the sons of Holy Mother Church, stating, that the said queen Mary did "humbly supplicate him, carefully to accomplish, approve, ratify, and confirm her intention to found a college, for the praise and honour of the Holy Trinity, and of the ever blessed Virgin Mary, and of all the saints and elect of God, and for the salvation of her own and her husband's souls, and the souls of their progenitors, and of their progeny;" not forgetting the soul of the priest, whose favour she was then humbly supplicating. The prelate further states, that "in compliance with the devout prayers and desires of the most excellent princess, and after due deliberation had with the prior and chapter of his church, and with their consent, he does approve and ratify the said intended foundation; which was to provide for a provost, eight prebends, two choristers, and a sacristan."

The church, which consists only of a choir and transept, stands at the east end of the north loch, and is a good specimen of English architecture; the windows at the east end of the choir are of great height, and have a magnificent appearance. It is probable, that a central tower was contemplated in the original design, the work being considerably raised in that part, though it is now terminated by gable ends, and a plain sloping roof; the west end of the church likewise

TRINITY COLLEGE CHURCH.

bears every mark of an unfinished design. This College, with its appurtenances, was given in 1567, by the regent Murray, to sir Simon Preston, provost of Edinburgh, who generously conferred it on the city; for which grant, the common council made most grateful acknowledgements.

A complete repair of the Church of Trinity College, has very recently taken place. The seats and galleries, which had become very ruinous, are removed, and an entirely new arrangement of the former has been accomplished. The pulpit, which is constructed with ornaments corresponding with the general character of the building, is placed in the centre of the west side of the transept, opposite the eastern windows; and from this point the Church presents one of the finest models of Gothic architecture in Scotland. The roof of the aisles being low, no galleries have been erected, a circumstance which contributes greatly to the sublimity of the interior perspective; a door which existed on the south side has been closed, and two others opened at the east end of the aisles. On the north side of the Church and connected with it, is a building, which may have been used formerly as a place of meeting for the provost and prebendaries. The door of communication is still apparent; it is now used as a vestry, and there is a very general report, that queen Mary, the foundress, lies buried here. The situation of this Church is very unfavourable, it being in a narrow street, and enclosed by a high stone wall; some alterations, however, are under consideration, which, when effected, will, in a great measure, supersede these complaints. The view represents the eastern end of the Church; in the distance is part of the North Bridge, and beyond it some of the buildings of the Castle.

Watson's Hospital, Watlington, Oxfordshire.

Watson's Hospital

WATSON'S HOSPITAL.

THIS charitable institution is situated in Tiviot Row, at a short distance southward of Heriot's Hospital. It presents a handsome and extensive front to the northward, composed of two slightly projecting wings, and a centre surmounted by a low spire, having a ship on its summit as an emblem of merchandize; against the roof of this part of the building is raised a large tablet of stone, richly ornamented, with armorial bearings; this elevation of the centre, is also assisted by an additional story, which occasions an agreeable and judicious break in the otherwise continuous line of the roof. In front of the Hospital is an extensive piece of ground for the exercise of the scholars, who wear an uniform dress, consisting of a dark-coloured jacket and trowsers. Maitland observes, that their dress is, in all respects, more like the sons of gentlemen than charity children, and that they are fed with plentiful variety.

The institution derives its name from the founder, George Watson, whose family for a long series of years appear to have been merchants in Edinburgh. Upon the death of his father, Watson was apprenticed by his aunt to a merchant in his native city; when his services were completed, he visited Holland, for the purpose of improvement in his profession, and upon his return, entered into the service of sir James Dick, bart. as his book-keeper, and on the erection of the Bank of Scotland, he was appointed accountant thereto: he afterwards became treasurer to the Society for promoting Christian Knowledge, and held several other important offices, all of which he discharged with honour and integrity, and dying a bachelor in 1723, left the sum of £12,000 sterling to found this Hospital.

The design of Watson not being carried into execution till the year 1738, the sum originally bequeathed had accumulated to £20,000; the building was then erected at the expence of £5000. An annual revenue of about £1700, were laid out for the maintenance and education of 60 boys; the number is now 70, who are to be the children, or grand children of decayed merchants in Edinburgh. The branches of education taught here, are English, Latin, Greek, and French; geography and the use of the globes, with arithmetic and book-keeping. It has been observed, that the treatment of the boys in this Hospital, is such as is probably no where else to be paralleled; for as an incentive to learning and diligence, those brought up to literary pursuits, are allowed ten pounds each annually, to prosecute their studies in the college of Edinburgh, for the term of five years; and upon leaving the university, the sum of thirty pounds is given to them as an encouragement to proceed in their studies privately. Such boys as are designed for trade, have twenty pounds given with them as an apprentice fee, and if they conduct themselves faithfully and industriously during their service, and remain thereafter three years unmarried, they receive the sum of fifty pounds, to assist them in commencing a trade on their own account.

WEIGH HOUSE.

WEIGH HOUSE.

AT the upper or northern end of the West Bow, and at the juncture of the Castle-hill and Lawn-market, stands the Weigh House, an ancient and mis-shapen building. It is said, however, that its architecture was at one time admired : the ground which it covers, was granted to the inhabitants of Edinburgh, by king David II. in the twenty-third year of his reign, and A. D. 1352. It is situated under the guns of the Castle, the quantity and value of goods deposited in it, having formed an attraction to the plunderer, and rendering it necessary that it should be securely placed and well guarded.

In the year 1740, the Pretender having entered Edinburgh in triumph, the highland army immediately kept guard at the Weigh House and other avenues to the castle, and in a few days orders were given to the guard here to cut off all intercourse with the castle. The governor dreading a want of provisions, sent to the Lord Provost, intimating, that unless a free communication between the city and castle was preserved, he should be obliged to dislodge the Weigh House guard with artillery. A deputation was thereupon sent to the Pretender, stating the danger with which the city was threatened; he answered by expressing his concern at the barbarity of bringing distress upon the city, for what it was not in his power to prevent. Deputies waited on the governor of the castle and obtained a respite from the cannonading for a few days; but a centry of the Pretender's army in the mean time firing at some people who were carrying provisions to the garrison, a sharp attack was commenced, which did considerable damage to the buildings, and killed many of the citizens; this induced the

WEIGH HOUSE.

Chevalier to take off the blockade of the castle, and the firing was then discontinued.

The Weigh House is the standard place of weights, and resorted to in all cases of dispute. Every kind of article is weighed here, and in general, the greatest quantity at once is a ton. It is let to a Taxman, who pays annually above £150 to the town for the lease. His allowance is a penny for each hundred weight.

At one period there was a turret to this building, containing a clock, but it was removed above 150 years ago ; and it is to be regretted that the whole building was not then demolished, especially as it has nothing to recommend it, and is an inconvenience, as well as an unseemly obstruction to the view. Its removal, however, is talked of, a consummation most devoutly to be desired by all admirers of the metropolis and of good taste. Some of the houses on the Castle-hill are also to be cleared away, which will open a convenient passage and excellent view. Indeed, when the projecting parts of St. Giles, the Weigh House, the pre-eminences adjacent to it, and the wooden houses on the north side of the Canongate are all taken down, this street will be one of the grandest in the kingdom, and will form a very fit counterpart of Princes Street, which has a similar termination.

WEST BOW.

THE BOSTON LANE.

1801.

WEST BOW.

THIS is a narrow and curved street that conducts from the Grassmarket to the Lawnmarket. The houses here are very high, with immense wooden projections which intercept the light of day. In former times it was very common to make these additions, which are called *outshots* to the houses, for the purpose of giving them more roominess and convenience, and they are still to be seen in several parts of the town. It is said, that the two sides of the street, were in some cases placed in such a state of apposition, as to admit of the inhabitants interchanging the pleasures of tea drinking, without the trouble of leaving their respective abodes. Formerly it was an object of great importance to be within the city walls, in order to be free from the depredations of the lawless mountaineers. Houses were then huddled together without much regard to proportion of size, eligibility of situation, or relative position. This accounts for the confused appearance of many of the streets in the Old Town.

A part of the original wall of the City is still existing in this quarter, and can be discriminated from the adjoining buildings. This wall was built in the reign of James II. who for that purpose granted a Charter, dated the 30th of April, 1450, which runs thus: “ Foraesmykle as we ar informit be oure well belovettis the Provest and Communitie of Edynburgh, yat yai dreid the evil & skeith of oure ennemies of England; we have in favour of yame, and fa the zele and affectionne that we have to the Provest and Communitie of oure said Burgh, and for the Commounne proffit, grauntit to thaim, full licence and leiff to fosse, bulwark, wall, toure, turate, and uther wais to

strength our forsaids Burgh, in quhat maner of wise or degre that beis sene maste spedefull to thaim." Together with this charter, the king issued an order for imposing a tax upon the valued rents of all property within the city and suburbs, that a sum might be raised for defraying the expences of carrying the above plan into effect. Thus was Edinburgh for the first time regularly inclosed. The wall began at the north-east part of the castle-rock, where there was erected a strong tower, which is known by the name of the well-house tower. From this it ran along the north side of the castle-hill, took a southerly direction at the place where the reservoir now is, then turned eastward, obliquely intersected the West Bow, and extended between the High Street and the Cowgate, at an equal distance from each, till it terminated at the Netherbow. This wall had four ports or gates, one of them was at the Castle-hill, another at the Netherbow, a third in Gray's Close, and the last in the West Bow, which was taken down about the beginning of the last century, and which was called the Upper Bow Port to distinguish it from that at the Netherbow. One of the hooks on which it was suspended still remains fixed in the old wall, about six feet from the ground.

The plate representing the upper part of the Bow, exhibits the Weigh-house and some of the buildings of the High Street in the distance. At the corner, on the right hand, formed by the projection of the houses, there is a close, conducting to the celebrated Major Weir's residence, which is behind the first row of buildings. Major Weir was accused by his contemporaries of numerous horrible crimes, such as magical incantations and intercourse with the nether world, for which he was condemned and burnt in 1670; and it appears, that under the influence of insanity and the cruelties inflicted upon him, he was induced to confess offences which it was altogether impossible for him to have committed: on this account the house was said to be haunted after his death, and remained a long time untenanted; it is at present in the occupancy of a woolcomber.

Opposite to major Wier's is the house, which tradition identifies as the place in which our ancestors enjoyed the pleasures of the light fantastic toe. This, however, if it was the case, must have been at a very remote period, since the oldest accounts on this subject, speak of the first assembly having been accommodated in the close which is known by the name of the Assembly Close. The situation delineated in the front of the plate, was once occupied by the old wall, to which reference has been made, and which crossed the West Bow in this place.

The second plate, or lower end of the Bow, shows the nature of the architecture which anciently prevailed in this venerable city.

The houses in this part of the town are very old and ruinous. One of them bears the date of 1604, and another, from which there is a vaulted passage to the Castle-hill, is said to have been used even before that time for the meetings of the council. Pious inscriptions seem to have been common in those days, as we find over the door of the house said to have contained the assembly rooms, the words, "*In Domino confido*", and in more than one place, the inscription "*Deo soli sit honor et gloria*".

It may not be improper here to mention an incident, which tradition has transmitted in indissoluble connection with the history of the West Bow. At some remote period of the existence of this street, there lived in it a tailor, of whom neither the name nor genealogy have come down to us. Of him, however, it is recorded, that for the period of twenty-eight years, he had discharged the duties of his important vocation with honour to himself, and comfort to others, in one of these protruding abodes; little imagining how liable the thread of his existence was to be snapped asunder by every wind that blew. It happened on a windy day, that the personage referred to was standing on the pavement of the West Bow, and a friend accosting him, expressed his wonder that he should

WEST BOW.

have built his house on such an airy foundation, or at all events should reside in it in its then perilous condition. The amazed tailor turning up his ghastly countenance, for the first time espied his hitherto unexplored habitation, and being seized with all the panic of twenty-eight years at one time, betook himself to a safe and more substantial residence.

It was through the West Bow, that the wretched Porteous was dragged to the Grass Market, in the year 1736, where the sentence of death which had been remitted by royal authority, was executed upon him by an infuriated mob, with all the deliberation of a lawful act.

THE HOUSES OF THE VILLAGE.

WHITE HORSE CLOSE.

THIS close or yard is now called Davidson's land, after the name of the present proprietor ; it is on the north side of canongate, a little to the west of the old girth cross, or cross of the sanctuary, where was executed the unfortunate duke of Montrose. According to the tradition of the neighbourhood, this close once formed the stable yard of queen Mary, and the principal part of its buildings have subsequently been occupied as an inn. Many alterations, however, must have taken place here since the times alluded to, and it is very probable, that the buildings seen in the annexed view, were erected in the year 1683, as upon the large window above the steps, seen in the centre of the print, that date is inscribed. This Close affords a curious specimen of the ancient architecture of Edinburgh.

The principal building shews a regularity of design, which indicates that it was erected for no common purpose ; the whole close is now let out in a variety of small tenements, and some parts are still used as stables ; its vicinity to the palace of Holyrood, strengthens the conjecture that it was once the royal stable yard. In this quarter of the city, there still exists a great number of closes, which were formerly inhabited by the nobility and gentry who were attached to the court ; but they have long since been deserted by persons of rank, and at the present time, display the same appearance of neglect and wretchedness, complained of by Maitland, who gives the following description of the Canongate. “ The town of the Canongate, which is an appendage of, and a suburb to Edinburgh, is situated at the eastern end of the city ; it consists of a spacious street, extending from the Netherbow Port, on the

west, to the palace of Holyrood on the east, about half a mile in length, whence run a number of closes down both sides of the hill, with gardens below them.

“ This place has suffered more by the union of the kingdom, than all the other parts of Scotland ; for having before that period been the residence of the chief of the Scottish nobility, it was then in a flourishing condition ; but being deserted by them, many of their houses are fallen down, and others in a ruinous condition ; it is in a piteous case ! ”

View of the Street from the Archway, looking towards the White Building.

Engraved by J. Smith.

WATER GATE.

NEAR the palace of Holyrood House formerly stood the Water Gate, but its place is now only indicated by a slight wooden arch thrown across the street, and some rude masonry to which it was attached on the western side. This Gate is rendered memorable by the ignominious treatment which the Marquis of Montrose received in his passage through it to the Tolbooth, in 1650. He was met here by the magistrates, the city guard, and the executioner, who conducted him along the streets in gloomy procession, placed on an elevated cart made for the purpose. The next day being Sunday, he was visited by some

WATER GATE.

unfeeling clergy, who, with officious zeal, descanted upon the enormous wickedness of his life, representing to him, that the punishment he would speedily suffer, would be but a short and easy prologue to what he must undergo hereafter. The pulpits resounded with declamations against him, representing him as the grand enemy of all piety and religion ; the ministers likewise reproached the people for the profane tenderness which they manifested towards him, which was termed “ movements of rebel nature.” He was finally sentenced to be hanged, and his limbs were hung up in the chief cities of the kingdom. The subject of the vignette stands near the Water Gate, and is traditionally called Queen Mary’s Bath.
